From: EMS_Amateur-owner@ONElist.com
Topic: 1 Message: 1

Hello,

There is a new survey for the EMS_Amateur community.

How much time a month do you spend practicing/using your EMS training?

Possible answers are:

o 1 Hour
o 5 Hours
o 10 Hours
o 20 Hours
o More than 20 hours

To vote, please visit the following web page:

http://www.onelist.com/surveycenter/EMS_Amateur

Thanks!

EMS_Amateur Owner

2. Forum

Yahoo group: EMS_Amateur

From: Patrick Nicholson
Topic: 2 Message: 2

Hello Everyone..

So far there are about 15 of us subscribed to the group. I've created this forum for amateurs who are in some way affiliated with Emergency Medical Services, or Emergency Services in general.

I would like to utilize this forum to share ideas on topics such as net control during events, passport boards, radio procedures, ham radio in the EMS field, etc.

If you have any tips and tricks, or ideas, please share them.

My name is Patrick Nicholson, I have been an amateur for seven years - N7WGR.. I alwo work for American Medical Response as an EMT.

There is a group of us EMT's who do a lot of volunteer events in the area, and we depend on amateur radio to communicate between each other, we're always open for ideas on coordinating net control, logging traffic, etc.

Welcome, Keith!

In your work as a police officer and firefighter, have you found times when amateur radio has helped out?

I can remember a time when nearby construction by our headquarters took out our phone lines, which is also part of our radio system. Our whole dispatch system went down, so we were only able to communicate simplex between nearby rigs, relaying info from dispatch, who was using a car battery and mobile unit.

There are several other hams who work in the field on rigs, and we were able to communicate using an amateur repeater.. This really helped out.

I had a pursuit one time that ran into the next county, and out of the range of my Operations and LEA channels. Mutual Aid was unreliable due to terrain. I went to the local ham repeater and talked my way through the pursuit with a deputy sheriff that was also a ham.

I don't like pursuits or engage in one if it is at all avoidable, but this was a stolen car with an armed robbery suspect in it.

The car was stopped at a roadblock prior to entering a populated area. It was before the days of cell phones and reliable radio systems {1981}.

I really doubt we would have got the guy if I had not had my Ham Radio with me in the car.

Hello Everyone,

I just subscribed to this list yesterday. I wanted to introduce myself. My name is Michael Erwin and I am a member of Green Lake Township Fire/EMS Department in Interlochen, Michigan. I have been a member of the department for 9 years. I have also been a ham radio operator for about the same amount of time. I look forward to some great discussions on this list.

Thanks,

Michael

Welcome to the list!

I've created this forum to discuss ham radio, and how it relates to the world of EMS.. How it has played a roll in your experiences, etc.

I work for AMR in WA state, I also volunteer with the Amer. Red Cross, and Special Olympics.. I carry my small handheld with me at work in my duty bag, that way if I ever need it, it's there. Our dispatch went down secondary to nearby construction, and I was able to coordinate and receive instructions via Ham radio, and communicate with a couple of other AMR field personnel that are amateurs.. But I use ham radio all of the time for simplex net operations and standbys, and special events that I do.

Here in Knoxville, Tennessee we have Med 10 as primary control for 13
East Tennesee County's and VHF also... (Most local Sheriff's Dept's
dispatch the units on UHF, and you only use Med 10 if your in Knox County,
or requesting to talk to a Knoxville Hospitial.) (Now Rural Metro's Alarm
Room is another story :-)). So I carry a dualbander so that I dont have
to carry to radios. Makes life allot easier :-) I am thinking of going to
one of the Yaesu's that is 440/2m any stories, or info? I just hope I can
afford one! The Alinco I am using has been fairly rugged, but I think it's
about to give up the ghost!

Yaesu's FT-50RD should be strongly considered. Email
them and request a spec sheet. It has a lot of very
useful features, and it also meets many of the
Mil-Specs.

The Yaesu ft-50r is great! I have had mine for six months and don't know how I lived without it! I have approximately 80 different frequencies in it, that I program via my computer with 4 letter alpha channel displays. I use the radio for work, hobby, and fun. You will need to get a high capacity battery with a case. You will also need to modify it.

Welcome to the group!

Are you an amateur yet, or planning? You should be able to find a club or group nearby where you can goto class and take your test.

I am on a team of EMS folks RNS's, EMT's etc. with the Red Cross down here where we do many public events like Special Olympics games, runs, parades, etc. Many of us are amateurs, so at the events we use a simplex frequency or repeater to communicate. I am in the process now of rebuilding my UHF repeater system, so that we can have the dedicated repeater to use to talk to each other when we are working or for hobby.

Ham equipment can be purchased cheap, espcially off of Ebay.com or at flee markets. I've even purchased used commercial equpment and have it programmed for ham bands. I have even used my ham handheld at work once when a construction accident severed our comm center from us field crew (AMR) and one other person happened to have his handheld also, so we were able to communicate things back and forth across the city..

Great! At radio shack, I would suggest a book called "Now You're Talking." That is what I used 7 years ago, I still think they use that title. It is easy, and will familierize you with ham knowledge. You could read just a first few chapters and pass the FCC exam.

Bridgewater Fire/EMS received ten Teletec 1000 vhf/uhf radios.

More are available for free to any Iowa Fire/EMS unit. These came with King uhf hand held units. All were under five years old and in good shape.

So if your in IA and your dept needs some good radios email me.

It's always great to have a back-up form of communications, especially
in a big city. I'm a firefighter/EMT, and I have a commercial HT
programmed as a pager on the fire freq's, and with the ham freq's that
I use most. Several of us have had our HT's on fires, and we've talked
to each other as a back-channel method of relaying info...

FIRST OPERATION
- Submitted by Woody Dent

Two little kids are in a hospital, lying on stretchers next to each other, outside the operating room. The first kid leans over and asks, "What are you in here for?"

The second kid says, "I'm in here to get my tonsils out and I'm a little nervous."

The first kid says, "You've got nothing to worry about. I had that done when I was four. They put you to sleep, and when you wake up they give you lots of Jell-O and ice cream. It's a breeze!"

The second kid then asks, "What are you here for?"

The first kid says, "A circumcision."

And the second kid says, "Whoa! I had that done when I was born. I couldn't walk for a year!"

Good day all,
My name is Carlene Hurlock. I am currently a EMT-B student. I have been a ham for the past 6 years. My call sign is N1UNG. My entire family is into Ham radio... I am truly interested how being a ham is going to help being an EMT. I am sure that they work well together.

Thanks
Carlene

Greetings!

I too am an EMT-B student, however ran on a local department as a driver/operator for 3 years. I can say from that point of view, it will help in several ways. Probably the biggest is, YOU will know how to use a radio. Most EMT's, Firefighters, & Police just think it will work in all conditions, you as a ham know better. Because of this you will probably be very effective on the air. Next is if your department provides EMS coverage for any "public service events" your ambulance already has a ham! This helps tremendously, both from in the department and for the hams. I have seen it more than once, the hams get to an event and are short 1 or 2 hams and the ambulance pulls up with a ham on the crew. Also, you would be able to hear what is going on as it is being reported and talk directly to the ham. In short, these are just a couple of examples of how being a ham could benefit a person working in public safety in any capacity.

Hello my name is Bruce Chappell and I work Part Time in a Hospital's Emergency Department as an EMT. My call sign is KE6TSM.
Last night I used my radio to monitor the Fire Freqs, and to report to the hospital the status of the plane crash in Burbank. Unfortunately this didn't help much as I expected because of a lot of misinformation, and miscommunications on the radio. For instance, I heard Med Control tell Command Post that an ambulance just left with 2 patients for our hospital. I relayed that information and we had everything ready for it when it should have arrived if it ran code-3. (Normally code-3 takes 4 minutes to reach our back door from the airport), then everybody stood around and waited thinking it wasn't running code-3 (Normally 6 - 7 minutes). After 15 minutes everybody had to get back to our other patients. The ambulance finally arrived 23 minutes after the radio call, and the paramedics said that they thought the call referred to another ambulance because they didn't even have the first patient loaded when they heard the call. Luckily the grand total was 6 patients, all minor.
I'm also a member of a group of ham radio operators (Hospital Disaster Support Communications System http://www.hdscs.org) who provide backup internal and external communications for critical medical facilities in Orange County, California whenever normal communications are interrupted for any reason.

To all at EMS Amateur.

I am a South African Paramedic with about 10 years EMS experience and I am currently employed offsore on an oil rig as the rig medic.

I also fulfill the function of the radio operator on board as there is very little medical work offshore.

My callsign is ZS1EMS and I operate maritime mobile on HF phone when I am at work.Unfortunately we no longer carry any CW equipment on board with the new GMDSS radio installation, so I am limited to phone operation only.

I look forward to some interesting dialogue through this list and also a QSO or two at a later date.

73's.

Regards

Trevor Lloyd

Jim
There is a onelist group called "phlscanner" that covers the greater Phila area (which includes allentown) and includes a good mix of news/police/fire/ems types with hams and scanner listeners - actually, I think most of the group would fit in multiple catagories.
The admin of the list maintains a website by county with freqs, PL tones, unit IDs, and etc., which should make the transition easier.
Jay

From: Tom Smith
Topic: 46 Message: 46

Question About B&W AP-10A Window Mount Antenna

As an apartment bound ham, the Barker & Williamson AP-10A window mount antenna for 40 through 2 meters, looks like my means of getting on the air. Does anyone have any direct experience with this antenna?

Or, has anyone you know used one where you could report on his/her experiences?

I'd like to hear any opinions on the subject, good OR not-so-good.

Been on the list for a couple of weeks now and haven't seen any activity, so thought I'd see if I can stir something up.

I've been a ham since 1974 and an EMT since 1978. About 98% of my hamming is public-service oriented. Spent 10 years on the street as an EMT till I popped a disk (you get two guess how and the first doesn't count). I have been involved in volunteer SAR since before I was an EMT. Hamming sort of got me interested in emergency service, and visa versa. When I was on the street, I always carried my H/T with me. It was nice to have when on long-distance transfers or to use the autopatch locally. I'd be interested to know how others combine their hamming/emergency service careers.

From: kc2csh@juno.com
Topic: 48 Message: 48

As someone involved in CAP-Comm, I'd like to know if anyone has had
good experience with this antenna. Our mission requires rapid transport
to and setup in places like armories and public schools, and operation on
both 2m and HF.

49. Back Injuries

Yahoo group: EMS_Amateur
Date: 2000-11-25 20:57:44 UTC
From: w9sar@cs.com
Topic: 49 Message: 49

Hey guys and gals,

The list has been pretty quiet, so I thought I'd pose a question. Though it does related to EMS, it doesn't necessarily relate to Amateur Radio (hope that's o.k.).

I've became an EMT in 1978 when I accepted a position with a private EMS provider that was county-contracted to provide EMS to the county. I've worked for three private providers throughout my career.

On Christmas eve 1988, my paramedic partner and I were making an interhospital transfer from a local hospital to another hospital so the patient could have a heart catheterization done. In the ambulance bay of the originating hospital, when we were lifting the stretcher, with patient, into the ambulance, I popped a disk. For those of you who haven't had the opportunity to experience the excruciating pain of a herniated disk, this was a new experience in pain that I could have lived without.

Probably against my own best judgement, I chose to continue with the run in the best interests of the patient, though he wasn't in any distress. This being a paramedic run, my 'medic partner had to ride with the patient, which left me to drive the painful short distance to the receiving hospital. After delivering the patient, I called dispatch to advise them we would be off line due to my injury and we returned to the originating hospital to be seen in the ER (the originating hsopital was also our medical control and our workman's comp hospital).

To make a long story longer :-) I had X-rays taken (which of course didn't show anything obvious) and consequently referred to a neurosurgeon, and of course, given some muscle relaxers and pain meds (the latter of which, incidentally, only marginally took the edge off the pain). When I went in to see the neurosurgeon, he immediately knew what the problem was (as if I didn't?) and ordered a nice little diagnostic imaging test called a myelogram (again, for those of you who haven't experienced a myelogram, I hope you don't have to -- it was about as bad as the original injury). Dx was, of course, a herniated disk, L5/S1. I was admitted and scheduled for an L5/S1 laminectomy and diskectomy.

Since I was no longer able to lift, I was "promoted" to dispatch supervisor when I returned to work. Luckily for me, I guess, I had some radio experience. I have to admit, it was nice to work Monday-Friday 8A-4P after all those years of 24 on/24 off (give or take 24 hours). I wound up having surgury a second time two years later; I

guess they didn't get it all the first time.

Now, my question is this: For those of you who may have experienced similar back injuries, have any of you returned to street-level EMS and for those who have, what problems have you encountered? My original post-surgury orders were that I could no lift more than 25 pounds, which of course is common sense. Many years since surgery, I have, admittedly, lifted much more than 25 pounds without a problem. While I have minimal discomfort, mostly aches and pains, I am relatively problem-free these days. I'm wondering what kind of problems I might encounter if I were to return to street-level EMS. Common sense (?) tells me that it's probably not a good idea, that the daily lifting, bending and twisting would eventually cause problems. But, hey, I miss the streets, what more can I say?

Anyone?

73,
Jeff, W9SAR

Hi Jeff,

I've worked in the streets for several years of a major city and must say that the possibility of an on the job injury and come across my mind. I've known several people to suffer back injuries in the field. Unfortunately I've only seen a couple of them return to the field, there are several dispatchers that are in your situation, they sustained a back injury, but don't want to risk coming back into the field, they miss the field work. An old veteran of the company returned to work about 6 months after his surgury, unfortunately just the other day I heard him call out of service after completeing a police call with an involuntary patient who got combative and agrivated his previous injury.

After countless broken elevators and stair-chairing out of apartments, scooping large patients out to our stretcher, and using the firemans carry, I have on ly suffered a muscle strain, but I worry because all I want to do is work in the streets. To conclude, I have not seen many people successfully return to the field after a serious back injury. I know that I would not listen to anybody tell me that "It's not worth your back: the money, the hours, the union." I would still make any effort to come back.

Take care,

Pat - N7WGR

Hi Pat,

Thanks for your response. I'm sure that I'll be hearing more of the same thing, and I'm sure that I'll take the advice to stay off the street. I guess I'm just looking for that one miracle story of the EMT with the bad back who returned to work. Sounds like I'm "stuck" behind a stationary mic rather than a mobile mic :-) (not that it's a bad thing).

Anyone know what the training options are in various places to upgrade from EMT-B to EMT-P.
Around here the only option is a 2 year college based A.A.S. degree program that, because of scheduling, usually takes 3 years and about $8,000 to complete.

In Indiana you take a state-approved Paramedic class, which is on the order of 2000 hours these days, I think, and run about a year, depending on class schedule. Very similar to the EMT-B process, once you finish and pass the class written and practical, you take the state written and practical, and if you pass, then you are certified.

Jeff,

Maybe you can go into the field as a trainer, preceptor, or field supervisor. I know one EMT who worked in the field for years, was rear ended in his POV and put in rehab for almost a year. He returned to work light duty working at the station, but eventually became a trainier, letting the two others on the car handle the tedious tasks.. We run training cars with one trainer/preceptor one seasoned employee and one new hire.

Where are you located?

In WA here, you are pretty limited on where you can go to paramedic school. There is one Junior College that offers the class, Central Wa Univ, Harborview MC, Grays Harbor. All are tough to get in to and usually require you to have several years field experience as an EMT. Some require you to be a fire fighter. I work private ambulance, and in this part of the state, the majority of the medics are fire fighters also.

Talk to a good surgeon, consult with a neurologist. My situation was the same, but as a police officer.

I did not have a problem with the mylegram or MRI, but would like to do an EMG on the Dr. that gave me mine.
Before the end of my first EMG my wife {a nurse} left the room crying. I endured three more.

My condition has become much worse. I have numbness in my hands and fingers { my injury is c5/6 t5/6 } and symptoms that have sent me to the hospital twice for a "heart attack" that was simply nerve impingement.

Please do not do anything that will worsen your condition. It simply is not worth it.

By the way, my work comp insurance settlement was $25,000, $16,600 after attorneys fees. That does not come close to what I have lost in overtime, or compensate me for the things I cannot do because of my injury.

So far these are the only links I can find with news relating to the Injured Paramedics in Nashville, TN. It appears that the mother of the child in distress left the scene of the accident in a POV with a witness to the accident.

Sources are reporting 2 Paramedics in critical condition, one with a head injury on a ventilator.....

59. Christmas Poem for Hams

Yahoo group: EMS_Amateur
Date: 2000-12-20 16:40:46 UTC
From: Carlene McCarthy
Topic: 59 Message: 59

Enjoy... and happy holidays..

A CHRISTMAS POEM

'Twas the night before Christmas and all through the shack
The rig was turned off and the mike cord lay slack.
The antenna rotor had made its last turn,
The tubes in the linear have long ceased to burn.
I sat there relaxing and took off my specs,
Preparing to daydream of armchair DX,
When suddenly outside I heard such a sound,
I dashed out the door to see what was around.
The moon shone down brightly and lighted the night-
For sure, propagation for the low bands was right.
I peered towards the roof where I heard all the racket,
And there was some guy in a red, fur-trimmed jacket.
I stood there perplexed in a manner quite giddy.
Just who was this stranger - di di dah dah di di?
He looked very much like an FCC guy,
Who'd come to check up on some bad TVI.
I shouted to him, "OM, QRZ"
"Hey, you by the chimney, all dressed up in red."
I suddenly knew when I heard sleighbells jingle.
The guy on the rooftop was jolly Kris Kringle.
He had a big sack full of amateur gear,
Which made a big load for a prancing reindeer.
Transmitters, receivers, for cabinets and racks,
Some meters and scopes and a lot of co-ax.
He said not a word 'cause he'd finished his work
He picked up his sack, then he turned with a jerk.
As he leaped to his sleigh, he shouted with glee,
And I knew in a moment he'd be QRT.
But I heard him transmit as he flew o'er the trees
"Happy Christmas to all, and to all seventy-three's."

61. Amateur vs Commercial Radios

Yahoo group: EMS_Amateur
Date: 2001-01-10 00:24:33 UTC
From: Jonathan Andrew
Topic: 61 Message: 61

Hello,

My name is Jonathan, I am an EMT-B in Buckhannon, WV. I am 24 and have been in ham radio for about 5 years, however I am new to the EMS world.

I have heard that there are FCC regs on the useage of amateur equipment for commercial purposes and vise versa. I was advised that it is acceptable to transmit on ham freqs using commercial units, but not the other way. However, I haven't been able to find any documentation to support this.

The area in which I live is rural and very mountainous. In many situations cell phones still aren't practical. My Yaesu FT-50 works very well to many repeaters.

Any comments would be greatly appreciated.

Hello,

Great Responses!! Thanks for all the wonderful info.

Does anyone know of a good, reliable place to purchase used commercial radios? I think I would prefer Yaesu since I have been very pleased with my FT-50 (and have batteries and rapid charger)

Thanks again,
Jonathan

Ebay.

Keep in mind that you cannot put a type-accepted commercial radio on a commercial frequency and use it in your day to day operation without the express permission of the licensee. When I worked NYC EMS in the early 70's I put a GE PR25 on HHC's frequency and 4th Division NYPD (dual PL's). Administration of NYCEMS had seizures over my having a portable when virtually no-one else but supervisors did. We were so tight with the PD that no-one there cared.

Topic: 65 Message: 65

Wow that was more than a mouthful, Lets see if I can give you some background. I am 43 years old white male married with 2 young children. I was one of the first medics in the country, having grown up in the NYCEMS system. I started when I was 16 (not legally of course but out of necessity). I worked what was the only medic unit in Manhattan at times. Following the "Olivieri-Steingut" hearings, I was unable to continue working in the city and moved to Florida. I taught the A.S. degree program in EMS at Broward Community College and worked as a Broward Co EMS Medic/Supervisor. My wife worked for the same system, she was also a medic, however, we were forced to work different 24 hr shifts if I wanted to work as a supervisor. We were newly married at the time and decided that seeing each other every third day was not conducive to a happy marriage. I began looking for alternatives. Foreign med schools were popular but we did not want to chance it. Chiropractic was very popular in FL and I decided to apply. I was accepted by 6 of 6 schools. I left FL in 1986 and went to school in MN. I had 90 credits undergrad from Brooklyn College in NY and had finished the B.S. RN program from Regents but did not take the practical exam. At that time they required 100 percent accuracy in the practical. Without having had any formal nursing training, I felt there was no way I'd pass. I still feel the Regents program is a joke and wouldn't want ANYONE caring for me that had only taken bunch of examinations. The program only served to provide me with more undergrad credits. I finished a B.S. in Human Biology while at Northwestern Chiropractic as well as the Doctorate. My wife got her B.S. in Computer Systems while we were in FL and an A.A.S in nursing with her RN while we were in MN. She was diagnosed with ALL Leukemia 2.5 years ago and has since had extensive chemo and a bone marrow transplant. She was in the midst of completing her M.S. in Nursing and APRN certification when this all happened. She is back to school now and finishing up in May '01. OK so that's where I'm coming from in making some suggestions. Medical school? well why, what are you going to accomplish? The money is certainly not there as it was years ago. Them's alot years for very little return. The fighting with the insurance industry and (Mis)managed care is just not worth the effort. I am in private practice and have no-one to answer to but myself. After 11 years of this, I am tired of the constant fight just to take care of people "the right way". I am going to close or sell my practice as soon as the opportunity presents and am applying with a large medical group here in CT. They have decided that if the MD's refer all back, neck pain and NMS conditions within their own group that they can make alot of money, and it's quite true. I am waiting to get their offer and ASAP I'm outta here. The past 11 years have beeen good but do I want my kids getting into any sort of medicine? only if it's veterinarian...why ---CASH PRACTICE! As to PhD programs, again do you want to be an employee or do you want some degree of independance? The only way to make any kind of improvement in your area's EMS care, in my opinion, is to get a certificate of need and open your own private ambulance service. No further (formal) education required, do it per

state regs as best as you can, get the volly's out of it and have the personal satisfaction of having a state-of-the-art EMS system. Here in rural CT we have volly's all over the place. A single paid service does the 911 and transfers for the town(s) with paramedic intercept. It's pretty sucky by most standards. I am the "Director of Emergency Management" for the town of New Hartford, CT. NBD as many say, volly position of Civil Defense and Emergency Management. Ambulance has about 50 members at the EMT/EMTI levels. It takes 5 to 10 minutes to get on the road and longer to get to calls. Do I feel safe, hell no. When my wife was ill, I had a written agreement to have the paid people respond to my home, no volly's, no 1st responders etc. Fortunately we never needed either. At 50 I can't see being the med school's novelty. I would look toward the ambulance wnership or toward education that leads toward independant practice reimburseable under third party insurances. EMT-P in ludicrious unless you want to make 10.00/hr and maybe get killed in the process. (I've been shot at 2x and been in a horrific accident... 3 near death experiences is plenty).

Gotta go see a patient, I'll rant more later on.

Dr. Mark WB2EQE

Amateur Gear is not type accepted. Amateur Gear doesn't have to be. Heck amateur gear could be home made, actually home brew gear is encouraged.

Yaesu has a commercial line of products under the Vertex brand name. Also they now own Standard which also has a commercial line.

The VX-10 is similar to FT50. Same case and size. Same drop carger. I have an FT-50 and VX-10 and VX-5. I use mostly commercial gear from Vertex, Standard, Motorola, Midland and Johnson, even on ham bands. There are only 3 or 4 ham frequencies I use on a regular basis.

Commercial radios are not field programmable (Usually). I still keep my FT-50 for situations where I need a frequency agile radio. I also carry my laptop and commercial radio programming gear in my vehicle, in case I need to reprogram in the field.

Sorry John but that statement is not at all correct; there is a type-acceptance policy on commercially made amateur gear. What certification do you think the major manufacturers wait for in order to market a new rig. Note every ad for the newly introduced radios (e.g. Kenwood TS-2000, Yeasu Ft-100 etc) has a qualifying statement when they ad first appears that the radio has not been type-accepted by the FCC and until such time, may not be sold in the USA. Why, because not only is there the standard Part 15 (non-interference) certification, but all radios must, if they are capable of 800 MHz receive, be incapable of direct and image receive of cellular, AND paraphrasing the FCC regs, be more difficult to modify than most amateurs are easily capable of doing. Home-built units do not apply as specifically stated in the regs. The above applies only to Commercially built and marketed transceivers regardless to whom they are sold. I've been through this debate extensively on other lists and can provide the specific regulations to back up what I am stating.

I guess I was a little broad, Commercially built amateur gear is not FCC type accepted for use on non amateur frequencies.

Example a 2 meter transceiver is FCC type accepted for use on 144-148MHz, thats it, no commercial freqs.

Cell receive on a VX-1 ?, I don't think so. The idea is just because it can be modified doesn't mean it's type accepted to use on the commercial bands. The MARS frequency mods are for authorized users and that doesn't mean just because you have an amateur license that you can transmit there. This thread is over a month old, BTW.

72. Programming Yaesu VX-10

Yahoo group: EMS_Amateur
Date: 2001-02-17 02:24:02 UTC
From: Jonathan Andrew
Topic: 72 Message: 72

Hello,

I have a VX-10 and am trying to program both my EMS and amateur freqs in. I keep getting a "ERR 1" error everytime the software tries to communicate with the radio.

Also, does anyone have experience with programming a radio to do paging?

Thanks!
Jonathan

Simple question, complex answer.
My answer is based on other vertex/Yaseau radios, but I think it applies to you also
You weren't specific about what frequencies and etc. In some cases you have to wipe clean the factory level programing, or you need particular software to begin with. I don't believe the amateur software will program commercial frequencies, but the commercial software will program amateur frequencies.
You didn't say whether your EMS unit is subject to FCC or NTIA rules. If your subject to FCC, you can recieve but not transmit unless the radio is type accepted for that particular Part. If your a federal user, and subject to NTIA rather than FCC (like CAP, MARS, BLM, etc) then whether you can use the radio gets complex legally, but technically has only 1 real problem, the antenna. The various models are shipped with antennas that have fairly high SWRs outside a narrow range, and one supplied with a factory antenna for 144-148 will probably burn out fast used on 158 unless you switch the antenna.
Also, you need to be aware that what the amateur world generally referrs to as narrow FM is what the commercial world generally referrs to as wide FM. Most users have gone to what the commercial world calls narrow. They interoperate fairly well, except that if your radio is wide only, which I think it is, receiving will sometimes seem like weak audio and subject to a high level of adjacent channel interference. When you transmit, you will be the source of high levels of adjacent channel interference and will sound overmodulated.
If you need specific info on that radio and NTIA compliance, let me know and I can check on it Monday.
I found the Vertex people to be very helpful. Have you tried contacting them?
Jay

Hello,

Sorry I didn't be more specific more.

I have a VX-10 which is a type accepted 5watt commercial radio and have the VX-10 software. I purchased it used and am trying to program both EMS and ham freqs into it.

However, I haven't tried to contact Yaesu/Vertex yet. I have an amateur radio FT-50 and software for it as well and it works wonderfully!

There is a bug with certain versions of CE14 software for VX-10.
Place the radio into program mode between selecting radio and
download.

example... correct procedure
1. Select Radio from main menu
2. Put radio into *clon* mode (Power on while holding PTT and select
knob)
3. Select download from sub menu
4. follow further instructions from screen

INCORRECT procedure
1. Select Radio from main menu
2. Select download from sub menu
3. This is where the software instructs you to put the radio into
Clone mode.
4. follow further instructions from screen

I don't think the frequencies are the problem, it is the order in
which you put the radio into clone mode. If the frequencies were
invalid you would not be able to enter them into the software.

I hope this makes sense to you. If you need further assistance
contact me directly.

Assuming you have the right software and cable, contact the local
Vertex Manufacturer's rep.
I have always found them very helpful. They are listed on the Vertex
webpage.
If your on the left coast, you may want to contact Vertex directly.

77. Hospital ham station

Yahoo group: EMS_Amateur
Date: 2001-03-19 16:08:52 UTC
From: kc2csh@juno.com
Topic: 77 Message: 77

I've been asked to participate in the planning process for a replacement hospital building, including a ham station.
New building will consolidate operations presently spread among 4 seperate locations. It will be a major facility, 600 beds, but it will not be the largest or the primary facility in the region. It will be the center for helicopter ops though as well as a trama center.
Old arrangement was for a station within a "fallout shelter" that was in a building basement. New building will not have a fallout shelter, and basement is essentially 100% committed for employee cafeteria, nuclear med, and etc.
Existing building has a rooftop 2m FM repeater. It is actually privately owned, and located there by agreement with a local RACES group.
Geography of new location will be outside that group's political jurisdiction. Plans now call for providing accomidation only, i.e., power and enclosure. Enclosure is HUGE, based on accomidating 2 1960s GE tube type repeaters. Owner group is essentially defunct, and seem to have essentially abandoned the equipment in place. It works though, license is current, and a volunteer has been doing maintenance..
There is a "races station in a cabinet" within the ED, but the equipment is antique, and there is no place to set it up except on a table in the parking lot. It also requires a 120vac power source. Seems like an equally bad idea.
The initial proposal calls for it to be an area within the security office, which is located in the ground level of a parking structure accross the street from the hospital complex. It was included only because the first go around had a mandate to not leave out anything that currently exists. This location is based on that being where all the radio equipment (paging and etc.) will be located. Strikes me as a bad idea. There is also a strong suggestion to delete this entirely based on cost considerations.
Are there any grants or other outside funding sources? Old correspondence says these were originally estabilished with some kind of Federal assistance.
Also, existing hospitals have only 2, 6, and 10m, and all low power equipment.. Is this normal?
I'd appreciate input on what others are doing; and what would be done in an ideal world; particularly issues like reasonal space and budget.

Thanks.

Jay.

Jay,

Most of our hospitals in the area have VHF ham equipment installed somewhere near the Emergency Department with an antenna on the roof somewhere. Some of the facilities have teams of employees who are amateurs that control the equipment and its use. Other facilities, which would be most of them, have an amateur team of volunteers, such as a radio club or ARES group. Most of the facilities have a locking cabinet or lock box where the radio/power supply is stored, along with paperwork, logs, etc. In the event of drill or disaster, the volunteer checks in with the E.D. and someone like the charge nurse would allow them access to the locked equipment, and they power the system up and get checked into a net. Being close to the ER is necessary so that staff can easily inquire about things or have you transmitt data. Hospitals now in the Seattle area here are getting 800MHZ radios on the city's trunk. This has been a big mess and has proven un reliable in both exercises and our recent earthquake. The only other alternative is the HEAR radio which also malfunctioned, leaving Amateur as the only viable solution.

I am part of a team trying to get UHF in the facilities, perhaps replacing old VHF ham rigs with dual banders. My repeater system is UHF and allows comms between all of the county hospitals including the EOC and Red Cross chapter. Our region has a primary VHF repeater, a secondary, and a primary/secondary simplex, same with UHF.

I would recommend a dual band amateur with at least a 7 AH Gel Cel battery with a floating charger and a powersupply be installed near the ER in a cabinet. Also includ a clipboard with your county's frequency plan.

Pat N7WGR

You might wish to visit the Hospital Disaster Support Communications System home page. The founder (April Moell) can provide a wealth of information.
www.hdscs.org

Good luck.

I am a ham and an EMT (soon to be Paramedic). I would advise you to locate the station in a location close by the ER charge nurse and/or the medical control physician. The only time we call to the hospital from the field is to ask the doctors for orders, and they're only going to give orders is if they actually hear our report and can ask questions. If you locate the ham station far from the med control physician, you run the risk of wasting precious time in a critical situation having to track down the doctor. I haven't really had much experience using ham radio in a disaster setting, however I use the med-com radio in the ambulance all the time.

It may be adventageous to consider two stations in different locations on two different nets - one on 70 cm located in the ER strictly to relay emergency medical information from units in the field (can be as simple as a handheld through a roof-top repeater) and another station on VHF - located away from the chaos of the ER - to handle other priority traffic (such as reports of death or injury or requests for supplies, etc.).

-Eric

About 1? years ago in New Jersey, I think it was Hurricane/Tropical Storm Floyd hit our area.
This flooded out a main telephone switching station in Bergen County. This switching station was responsible to hand off calls from local lines to the long distance companies. Bergen County could only dial within the county. Telephones outside of Bergen County could not dial Bergen County numbers. They had no contact with the outside world. Questions arose from state OEM.... Are they still alive over there? What is the status of their hospitals? power outages? etc... We have a SPEN channel Statewide Police channel, one channel pretty much for the entire state. Useless during a widespread emergency. (Too much radio traffic, can't get a word in edgewise)

At first minor communications were being done by Mobile paramedic units, pass this info on to the next hospital... etc. MIC-COM, the regional EMS dispatch, who was trying to relay these messages from paramedic units was also out of commission. They have multiple tower sites that all communicate back to the comm center through telephones lines. They were ALL out.

We deployed hams to the hospitals to communicate with the rest of the world, not to communicate with ems units in the field.

Hams became their only communications outside of their county.

Eric:
I've been a vol. EMT for 25 years. I'm recently retired. Several squads in my area are beginning to go to paid paramedics. I'm thinking of "upgrading" Every program around me seems to be effectively 3 years of community college. I'm interested in it as a volunteer, not as a career. What did you do?

My name is William Dohr. I am not only a Firefighter, EMT, Skywarn affiliate and Communications specialist but I am also and amateur radio operator-(WA1EMT).
I have started up my own business teaching various government agencies about different styles of emergency communications as well as opening their eyes to the world of amateur radio.
I want to continue learning about this wonderful and often overlooked field and I hope that I can contribute something to the group.
I am currently getting a few amateur radio operators to start calling traffic information into a major radio network for the central and eastern Boston area so that they can see and understand our potential. So far its a great success.

Willaim Dohr

RE: While I am not an EMT, I am a ham. I am also a sufferer of an L5/S1 herniation and subsequent diskectomy. I would like to make several points in this reply, please bear with me. First, while I do not perform the same services that EMT's do, I have worked for years in a field which places great stress upon the spinal column, though not always vertically by lifting. I have earned my living as a "12-volt specialist", working inside all kinds of motor vehicles as an electronics tech/installer. Speed controls, two-way radios, sound systems, alarms and security, cellular communications, and just about every kind of "toy" you can get for a vehicle...I've done TONS of 'em!

If you have ever attempted to access the wiring under your dash, around your steering column, under your floor carpeting, behind your seat, above your headliner, inside your trunk--anywhere it is hidden from view--I've been there! As you may imagine, I have been in some

pretty "pretzel-ized" positions. I've been doing this since 1984 as a profession. I have always considered myself "back-safe" because of all the twisting and flexion my spine goes through, and have never had a serious back injury in my life--until January of this year!

Like yourself, I was also delayed in my diagnosis, having been put through over three weeks of X-rays (the WORST method, I feel, of diagnosing many back injuries), medical prodding and poking, and most incredible of all, PHYSICAL THERAPY before someone finally threw up the red flag and ordered an MRI scan! I was on go-o-o-o-o-od drugs, if you know what I mean, but that did nothing to help my problem. It did provide some easement of the pain, but mostly just left me a speech-slurred, half-awake lump in a chair parked in la-la land.

Well, the MRI caused quite a stir--EVERYTHING stopped, and I mean RIGHT NOW! Nobody would even touch me, until after I had my surgery. This took until late March, with me downing four and sometimes five Vicodin horsepills daily, just to maintain a hold on the pain.

I am puzzled as to why you were exposed to a myelogram instead of an MRI scan (or are they similar?). My MRI was quite comfortable to go through, so I guess I should be thankful for not having to go through a painful exam such as yours!

Anyway, to the point: I am now undergoing post-operative rehab/therapy, and have been doing so for over two months. I still have not returned to work, I have given very serious thought to a career choice change. Like yourself, I wonder how I will fare in the long run, knowing what I must do to facilitate my job requirements. Complicating matters, is the fact that I am 6'2", weigh 325 lbs, and am a diabetic! I want to use my vocal and radio skills, have considered being a dispatcher. There are many things I can't do well now, such as walking more than about a mile (eliminates post office work), and my range of motion, while pretty good for a big person, is perhaps not sufficient to keep me crawling around, through and into motor vehicles.

I am open to suggestions regarding what to do next!

Thanks for eading this, sorry for the OT reply!

86. Back Injuries Revisited

Yahoo group: EMS_Amateur
Date: 2001-06-16 18:23:14 UTC
From: mlevine@compsol.net
Topic: 86 Message: 86

Hello all. The list has been very quiet lately and the topic of back injuries always stirs my interest. Some background... As some have you know, I was one of the country's first (and youngest) EMS Paramedics, having started in NYCEMS in the early 1970's. For those of you that have benn injured on-the-job, have you ever seen an ER doc that had any idea of how to examine an injured neck or back? I was built somewhat smaller than most of my peers and it wasn't unusual for me to be hurt doing a 5 or 6 flight carrydown from a NYC apartment building. I'd be sent into the ER where the Doc would poke around (as if she/he knew what to look for) as say you sprained your back, take this pain med and muscle relaxer and go home for 6 weeks. Huh? 6 weeks, I was 17 gung ho, working a 911 ambulance in Manhattan, 6 weeks nah! I'd go home, see my "uncle Al" the Chiropractor, and be back in a few days.

The point? Sometimes you have to look outside the box folks. You all get so medically oriented and wind up victims of the surgical failure list. The fact is the majority (>90%) of back/disc surgeries are outright failures! I spent 15 years in EMS, ran over 50,000 911 calls and decided to change careers 1986; I finished my AS in EMS and BS in Human Biology and went to Chiropractic College receiving my DC in 1989. I haven't sent 11 patients to surgery in 11 years of practice. Please understand, I am not anti-medical by any means, HOWEVER, MD's know squat about treating back pain. The majority of my practice is by MD referral.

If you would like to know more about making the transition from EMS, I'd be glad to go on. I've been there, dome that, and would be happy to help anyone do the same.

Mark Levine, D.C.
Chiropractic Physician
WB2EQE (since 1972 Amateur Extra)
NYCEMS 1973 - 1980
Broward Co ESD 1980 - 1986
7/6/86 major head neck and disc injury on-the-job
Rescue Truck destroyed - 65 mph impact driver's side

87. Motorized mount on SUV

Yahoo group: EMS_Amateur
Date: 2001-07-02 18:19:41 UTC
From: Mark Levine, D.C.
Topic: 87 Message: 87

Hello all:
I am contemplating using one of the Comet, Maldol, or Diamond brand motorized mounts on the rear door of my new SUV and wonder if anyone has tried this? I'd like to use either a 49" or 62" dual bander on the mount which I will tip forward 60 to 90 degrees to allow entry into my garage. Anyone have any experience with these mounts? The other alternatives are 1. a 14" dual bander on the roof forward of the sunroof (didn't work real well on a mag mount) 2. a Hitch mount adapter 3. a trunk lip mount on the hood (rather ugly IMHO). The roof rack is isolated from the roof and non-conductive which ruled that out right away. I plan on using my FT-8100R as both transceiver and public service scanner.

Suggestions?

Mark

What do you guys know about Minitor 3's (one of Motorola's voice pagers)
I have some questions

1. Where can I get a manual?
2. Are different channels (i.e. A and D) dependant on one another, or can different tones and alerts go in each individual bank?

any other sugestions?

Have any of you guys ran APRS on a medic? like with the Kenwood handheld/TNC combo. I was just wondering. Also does it cause any interference to a 12-lead?

I have an APRS tracker that I built into an ammo can with a radio shack HT.
I set the GPS on the dash of the rig and have the box behind the seat.
There have been no problems with interference. We also have a GPS AVL
mounted in the rig so that dispatch can keep an eye on where we are at, that
unit interferes with our AM/FM radio, and at quarters it affects the
televison sets. I haven't found any problems with the APRS.

If you're with a patient on scene I would not advise carrying your kenwood
on you for APRS tracking. It could interfere with the monitor and/or pacing
going on if it's really close. You don't want to introduce any un necessary
RF into the proximity with a monitor or 12 lead going.

Hey this list is alive :)

Thanks for the info, and I wasn't planning on taking the radio with me, build something like you said. I've been looking a sealed box called OtterBox, they are almost indestructible and water tight. I can fit a HT and a GPS in them. Thinking maybe for SAR???

I built my ammo can box cheap using the HTX 202, a 7.5ah gel cell, a Delorme Tripmate. I've had it about a year and it's great. It's been left outside and slammed around. I brought it with me on a trip across state, and it worked great. I have another Delorme I'm building a Tiny Track II inside of, and another tripmate is on the way for a Ham Hud I am going to install in the truck. Geez.. the APRS really bit me. I was active in SAR for about seven years but drifted out about four or five years ago because of scheduling, work, etc. but it would be a great asset.
----- Original Message -----

Here in WA we had that quake in Febrary, and I was called in for the Red Cross. I was in the dispatch room, but I equipped two damage assessment vehicles with APRS and everyone thought it was amazing, watching the vehicles move around the county.

95. New to the group, with a few questions...

Yahoo group: EMS_Amateur
Date: 2001-09-05 04:04:20 UTC
From: fit2000@uol.com.br
Topic: 95 Message: 95

Hi, friends!
I've been a chopper pilot for the last 15 yrs, and have done countless rescue flights. I had classes on basic techniques of rescue - I can even operate what we call here a pneumatic cutter, to rescue people from car crashes.
But I'm very interested in having a complete course on EMS/EMT. Could you friends give me hints? I would like to know - and you can send me urls with information, if possible - where in the US and Canada I could find classes. I've read various papers about this, now I feel confused. Where do I get the training? How long would it take to get an Professional EMS certification? I've read that in some schools you can get the certification in less time, I mean, more hours a day, so that you can finish the entire course in 1/3 of the normal time (but with the same # of total hours). After having EMS and EMT, what comes next? If I intend to try the med school later, can I skip classes I've already had?
I thank you in advance for any help, specially as I see it's kind of off topic. If it's easier, you all could suggest sites with "good quality" info about all this.
Tks again,

Paul Nader

Most all of the Community Colleges, and many of the school district
Adult Education programs have EMT classes available. There are several
CC districts in California that have Paramedic training programs as
well.

The best places to start would be:
http://www.naemt.org National Assn. of EMTs
and
http://www.nremt.org National Registry of EMTs

A couple of specific links for you would be:
http://www.aams.org Assn. of Air Medical Services
http://www.nafp.rotor.com Nat'l Assn. of Flight Paramedics

Different jurisdictions have different levels of certifications. The state of WA has First Responder, EMT-Basic, EMT-Intermedicate/EMT-IV Tech, EMT-D (Defibrillator), ACLS-EMT, and EMT-P (Paramedic) EMT-B is the most common and can be acheived after completing a three month or 112 hour coarse. There are several EMT-B schools around my area. Check with Communty Colleges. Many EMT's find work at private ambulance or fire departments. Some just volunteer at Red Cross, etc. Most full time EMT's will earn additional certifications, such as the IV Tech, and ACLS (Advanced Cardiac Life Support), PALS (Pedicatric Advanced Life Support), Combitube, and PHTLS (Pre-hospital Trauma Life Support) these are not required but improve your knowledge and will make you a better candidate for Paramedic School. in WA it is very competetive and difficult to become enrolled in paramedic school. Only a few campuses offer the Paramedic and many require you to be a fireman with experience, since a lot of paramedic service is provided by fire dept.s around here. There are two schools in the state that let non-fire fighters enroll. The classes prepare you for the state registry exam and national.

EMT's must re-cert every three years, using one of two methods: OTEP (On-going monthly classes) or CME (Continuing Medical Education) which is a bit more frustrating. Paramedics must also recertify this way, but must attend county base station meetings, and keep current on all the additional certs required for the state: ACLS, PALS, PHTLS. In addition, they must document so many entubations, IV's, and other invasive procedues, and must meet the years minimum, even if you must go into the morge or ER to get them. The two medic programs in the state require three years field EMT experience, I am sure military time as a medic counts also to be considered for acceptance. The paramedic school is an addional 1200 hours/1 year including didactics and class and ride time. This includes ER time, Ride Along, Class, Lab, state exams, and clinicals in different areas of the hospital, such as the CTU, CCU, PICU, NICU, etc. Once you pass the national exam, you take the state exam, you must have a sponsor for the state card from a hiring agency. Once you have your state card, you must contact and meet with the medical directors of the counties on which you intend to apply for work as a paramedic. You must interview and take each counties protocol test in addition to another state written, and they will endorse you to work in their county. Then you must find work with an amulance company, fire dept, hospital, if you haven't already. Most employers will keep you on probation from 6 mo to a year before you are turned loose on your own.

Some medic units staff two paramedics, some one medic with an EMT, some units are Dual role FireFighter medics, some rigs are EMT-I's. It is best to attend schools close to where you plan to work. The average cost to attend paramedic school is from $8000.00 to 15.000 depending on if you goto a community college program or a university, or out of state, etc.

Becoming an EMT-B is no sweat, and not a life altering thing. Attending paramedic school is, and you best plan on making this your career choice, due to the cost and time it takes just to earn the paramedic. Be an EMT for at least two years before considering paramedic school, you'll know by then if it is for you. Most people with regular jobs enjoy volunteering as an EMT and are able to satisfy the monthly on-going education. Very few people can make the commitment for paramedic school.

The state of WA is probably one of the most difficult places to become a paramedic, next to OR. California and Colorado and not as difficult I understand. But all states vary in their schoolling and levels of EMS certifications. You can get your National EMT-B which gives you the ability to jump around, some states require you apply for reciprocity, if you earned your EMT in one state, and wish to work in another sometime, but this is not hard, and if you have your National, no extra work would be needed.

Hope I helped you out.

-Pat

Here in Southeastern PA, I just took a EMT-B (Emergency Medical Tech. - Basic) course. it was 3 nights a week, 3 hours a night, 2 saturdays, and took 2+ months. I'm only 16, and the course was not that difficult.
EMT (Basic)'s are allowed to ASSIST with certin medication administration, with authorization from Medical command. We can assist with Epi-Pens, Nitroglyceryn, and certin prescribed inhalors for respritory difficulty.
You get to play with the 'Hurst' tool?!? - They won't let me until I'm 18.

Hi Jon and congrats on your EMT ticket.

Here's something you might be interested in...

I just went to a live demonstration of Motorola's latest incarnation of the 700MHz high speed data, voice, wide band video and AVL system. I'ts the only system like it operating in the world and it's here in my county as a test bed.

It was pretty neat being able to pull up web pages and live video from outside sources from the inside of a Sherriff's Office Crown Victoria - faster than I can do it from home.

Subject: ARES ASSISTANCE - PLEASE CALL ME

ARES is seeking additional volunteers from the Greater New York City area----to assist in supporting the World Trade Center disaster relief and recovery effort. ARES is assisting the American Red Cross and emergency management officials. New York City-Long Island Section Emergency Coordinator Tom Carrubba says volunteers must have a VHF (2-meter) or, preferably, a VHF/UHF (2-meter/70-cm) mobile radio, power supply, and mobile gain antenna. This is a change from previous requirements. Carrubba says hand-helds have not been sufficient to deal with the difficult operating conditions. Amateurs are working two 12-hour shifts per day, 8 AM to 8 PM and 8 PM to 8 AM, "plus or minus three or four hours, mostly plus." All volunteers must report to American Red Cross Headquarters (address will be provided when you contact me) for credentials and assignments. You must use public transportation to ARC HQ because of limited vehicle access; there is no parking in that area. Amateurs with the necessary equipment and willing

If you can help please contact Steve, K2SO at k2so@... or (908) 289-6573. Also please help by sending this to other hams in NNJ.

THANKS & 73

From: Kevin J. Dittrich
Topic: 103 Message: 103

Hi... Just thought I'd introduce myself to the rest of the group. My name is Kevin and I'm from just outside of Detroit. I start my EMT training next week. I am pretty excited. I've wanted to take this training for a while now. I eventually want to end up being a paramedic. I have been a ham since January of this year. Looking forward to talking with everyone.

I'm looking for an intensive accelerated EMT-I or EMT-P course
available anywhere in the US.
Change in work status requires that I obtain national registry status
at EMT-I or preferably EMT-P ASAP.
I'm currently EMT-B, but not national registry.
Local programs are all community college based, 1-2 nights a week for
about 3 years.
Will travel and burn up time off to get this done. Does anyplace still
do the intensive 8-12 week EMT-P programs to national registry standards?

Thanks

Jay

US Army Chem Warfare & Terrorism - Medical Issues and Response

Live Satellite Broadcast Nov 28, 29 & 30 (Each day is different)
12:30-4:30 each day.

ONLY online registration, or pre-reg by mail will be allowed. The sponsor strongly recommends that walk-ins not be allowed, for security purposes. All of the details for the sites will be given on-line when registering. CME is provided and will also be handled on-line after the conclusion.

See the web site at: http://www.biomedtraining.org/index.htm for more information about the curriculum.

Details about the Teleconference appear below:

Agenda/Objectives

DAY 1 - Presents an overview of biological agents.

Identify biological pathogens of concern for use in warfare or terrorism;
Identify the characteristics that make a biological pathogen an effective

weapon;
Describe the epidemiology, pathogenesis, clinical features, and medical management of potential pathogens and toxins.
Identify 10 principles in the management of the clinical aspects of a biological weapon attack;
Live Q & A session with experts in biological casualty care.

DAY 2 - Presents an overview of chemical agents.

List the 4 major chemical agent classes and discuss the key effects on humans;
Identify the key elements of pre-hospital medical management for each of the 4 major chemical agent classes;
Identify continuing therapy options for chemical casualty care;
Live Q & A session with experts in chemical casualty care.

DAY 3 - Discusses the management of a biological or chemical warfare or terrorist event with experts. Describes the roles of the first responder, public health and medical personnel.

Describe differences and similarities of biological and chemical agents and effects;
Describe principles of decontamination for chemical and biological agent casualties;
Describe personal protection for chemical and biological terrorism incidents;
Identify components of the primary care providers', public health and community response to a biological or chemical terrorism incident;
Identify psychological effects of chemical and biological terrorism.
Live Q & A session with experts in chemical and biological casualty management.
Target Audience:

Military and civilian medical care providers;
Public health professionals (e.g., epidemiologists, laboratorians and veterinarians) who are involved in disease surveillance and prevention;
Clinical laboratory staff, pharmacists;
First responders and others who would assist in recognizing and managing casualties from a biological and chemical agent attack.

TERRORISM RESPONSE FORUM: THE INTERNATIONAL CRITICAL INCIDENT
STRESS FOUNDATION, INC. (ICISF) PRESENTS:
"HIGHLIGHTS FROM THE SIXTH WORLD CONGRESS - PART I"

November 7, 2001 2:00-3:00 p.m EASTERN TIME

The ICISF conducts a bi-annual World Congress on issues relating to stress management resulting from emergencies and disasters. During the 2001 World Congress, EENET covered some of the sessions on recovery activities and will be sharing some of what they found with you, our viewers. This first session focuses on the shooting at Columbine High School in 1999 and crisis intervention strategies that worked, those that were sub-optimal, and on-going challenges for three populations: emergency responders, the schools, and the community.

111. INFRASTRUCTURE/TRAINING: Operational Security (OPSEC)

Yahoo group: EMS_Amateur
Date: 2001-11-06 16:18:59 UTC
From: Garrison St.Clair
Topic: 111 Message: 111

In recent years emergency responders, beyond those in law enforcement, have become increasingly aware of the probability that they will be responding to events precipitated by terrorist acts.

In order to prepare for responses to terrorist incidents considerable training has been offered by federal, state, and municipal agencies in the United States...and to a lesser extent by equivalent agencies worldwide.

One aspect of response - and planning for response - to terrorist acts that is given merely cursory coverage is that of Operational Security (OPSEC).

On several lists relating to Emergency Management and/or Emergency Response the topic of OPSEC has received brief, passing mention. And there has been a clear lack of understanding as to what OPSEC really is, how it need to be addressed, and what its importance is to responders and mangers.

Fortunately, there is a federal agency who's entire focus is to provide guidance in regard to OPSEC. And that information is available to almost everyone in SAR, Fire Services, EMS, EMCOMM, as well as Law Enforcement.

There are many documents, handbooks, guidelines, etc. available from the:

Interagency OPSEC Support Staff: http://www.ioss.gov

Please note that you will need to print out the order form from their website and make a written request on organizational letterhead. For those units that are not directly affiliated with governmental agencies, you will need to arrange with an agency to request the documents for you.

This really is a website you need to visit and make OPSEC part of your organization's training.

Consensus-based haz-mat standards now available FREE from NFPA!

An urgent message from NFPA President George Miller:

The impact of the tragic events that occurred September 11th has been felt around the world. Our lives will be forever changed as we face the unhappy truth that there are groups and individuals who threaten the safety and security of innocent people.

Chemical and biological weapons of terror are two examples of the very complex hazards for which emergency service providers must now prepare.

NFPA's Hazardous Materials Response Committee has developed a series of consensus-based standards that provide guidance to first responders who may be confronted by emergency incidents involving chemical or biological substances.

Due to the ongoing threats against our nation, NFPA is offering immediate free PDF downloads of three critical documents on our web site at www.nfpa.org:

NFPA 471: Recommended Practice for Responding to Hazardous Materials Incidents
NFPA 472: Professional Competence of Responders to Hazardous Materials Incidents
NFPA 473: Professional Competence of Emergency Medical Responders to

Hazardous Materials Incidents
Key supplements drawn directly from NFPA's Hazardous Materials Response Handbook are also free in PDF format at www.nfpa.org:

Beginning the Hazard Analysis Process
Guidelines for Decontamination of Fire Fighters and Their Equipment Following Hazardous Materials Incidents
Preparing for a Hazardous Materials Accident: The Hospital Perspective
Emergency Response to Incidents Involving Chemical and Biological Warfare Agents

The Chair of NFPA's Hazardous Response Committee, Chief John Eversole (ret.) says, "In 1997 the technical committee recognized an emerging threat from chemical and biological warfare agents and issued two Tentative Interim Amendments to raise awareness and address the special situations involving weapons of mass destruction." This TIA material is included in the free PDF documents.

Chief Eversole adds, "Everyday chemicals can kill even faster than anthrax. If we know and follow the established standards of routine hazardous materials response and pay special attention to proper personal protective equipment, we can operate more safely when responding to any hazardous materials incident."

NFPA has a long history of working alongside and in support of the emergency response community. We are dedicated to increasing public safety while protecting first responders from the dangerous occupational hazards they encounter.

115. AIRCRAFT CRASH: USA-NY - AA587 - ADVIOSRY

Yahoo group: EMS_Amateur
Date: 2001-11-12 15:42:30 UTC
From: Garrison St.Clair
Topic: 115 Message: 115

American Airlines flight 587 from New York City to Santo
Domingo, Dominican Republic crashed shortly after take-off (0915 EST) from
John F. Kennedy airport on Monday, the U.S. Federal Aviation Administration
said.
The wide-body Airbus A-300 twin engine passenger jet crashed five miles from
the airport in a residential area of Rockaway, in the Queens borough of New
York City, said FAA spokesman William Shumann.

The FAA said it had "no information on what caused the crash."

Last contact with aircraft approximately 1 minute after takeoff.

246 passengers and 9 crewpersons on board.

12 Buildings struck.

4 known fires.

Engine may have separated from fuselage.

Eyewitness accounts differ as to fire/explosion/smoke.

NYC at Level I Alert.

All bridges and tunnels to and from NYC have been closed to non-emergency
traffic as a precautionary measure.

The organizers of the 12th World Conference on Disaster Management are calling for presentations for next year's Conference (www.wcdm/org)

The Conference will be held in Toronto from July 7-10, 2002 - WCDM has become one of the premier events in North America for training and networking among Emergency Management, Business Continuity, Emergency Health, Care, Security and Risk Management professionals world-wide and for the organizations which supply and service these professions. The 2002 Conference is expected to attract over 700 delegates from Canada, the US and from around the world. Conference delegates come from all levels of government, educational institutions, business and the emergency response community.

The Conference theme will be "The Changing Face of Disaster Management". Presentations should fall into one or more of the following categories:

- Real Events/Real Lessons Learned
- Technical Risks/Emergencies
- The Human Element in Disaster Management
- Future Trends in Disaster Management
- Disaster Management Principles & Practices

Presentation abstracts must be submitted by December 15, 2001. Please visit www.wcdm.org to access the Call for Presentations and to see a more detailed

description of the program outline. If you have questions please call James Kilgour on (905) 540 5296 or email: jkilgour@..., please forward all presentations to Melissa Smith-McGuire melissa.smithmcguire@...

117. SAR Lawsuit

Yahoo group: EMS_Amateur
Date: 2001-11-22 18:15:20 UTC
From: Garrison St.Clair
Topic: 117 Message: 117

The item below the break-line was part of yesterday's newsfeed. It refers to a lawsuit that has been commenced in Utah against four counties and alleging negligence during a search for a missing child earlier this year.

Without commenting on the merits - and without reading the documentation or having further knowledge, none of us can really comment - this is clearly one of those "head's up" that should be noted by SAR teams, Emergency Managers, and others involved in organizing, managing, or prosecuting a search.

Multimillion-Dollar Claim Filed By Wayments Against Searchers

Gage Wayment, 2, died in the mountains near Coalville in October 2000. His grandmother has filed a multimillion-dollar claim against searchers.

(Salt Lake Tribune 21NOV01) COALVILLE, UTAH -- The family of 2-year-old Gage Wayment, who froze to death last year in the mountains where his grieving father later committed suicide, has filed a multimillion-dollar claim against those involved in the search for the youngster.
Family members contend that searchers who spent six days, starting on Oct. 26, 2000, scouring the mountains east of Coalville for the child were "negligent," and that had they "conducted an appropriate and proper search . . . Gage Wayment would have been discovered prior to his death."
That alleged negligence caused the boy's father, Paul Wayment, so much "grief and stress" that he killed himself on July 17, 2001, the claim contends. The family seeks more than $1 million in damages for each death.
"We obviously disagree with the claim," Deputy Summit County Attorney Dave Thomas said Tuesday. "The county attorney's office will recommend against paying any of this claim."
If the claim is denied, the family could file a lawsuit and ask a judge to decide the issue. The filing of a claim prior to a lawsuit is mandated by state law in this type of case.
Barry N. Johnson, attorney for the Wayment family, declined to discuss the issue Tuesday.

The formal "notice of claim" was dated Oct. 26, 2001, and sent to Summit, Salt Lake, Wasatch and Weber counties, which all sent search and rescue crews to look for Gage Wayment.

The Salt Lake Tribune received a copy of the notice Tuesday from Summit County after filing a request under the Utah Government Records Access Management Act.

The Wayment story began Oct. 26, 2000, when Paul Wayment took his son out for a ride in the mountains about eight miles east of Coalville to scout for deer. The father said he left the boy alone in the truck for about a half hour. Gage was gone when he returned.

The child, whose frozen body was found six days later by a volunteer, under a blanket of snow, had worn through the feet of his pajamas trying to find his father.

Paul Wayment later was charged with negligent homicide for failing to take proper care of his child and was sentenced to 30 days in jail on July 17, 2001. But rather than turning himself in at the Summit County Jail, he killed himself near where his son's body was found.

The claim is filed on behalf of Carol Wayment -- Paul's mother and Gage's grandmother.

"Specifically, the responsible parties failed to use well-known and established search and rescue techniques and further failed to use readily available technology and resources, including properly trained dogs, in their search," the claim contends.

"Additionally, the responsible parties unfairly focused their efforts on Paul Wayment as a potential criminal suspect rather than focus on locating Gage Wayment, thus wasting precious time and resources that could have been used to locate Gage Wayment," it said.

The mention of search dogs apparently refers to Summit County's use of animals from its own relatively new search-dog program instead of calling in animals from Rocky Mountain Rescue Dogs, an established private group the county called in the past.

118. Re: SAR Lawsuit

Yahoo group: EMS_Amateur
Date: 2001-11-25 06:40:15 UTC
From: Mike D.
Topic: 117 Message: 118

I believe we are covered in IL well kinda we have what we call the good samaritan law that if we do as much as we legally can and nothing beyond what we are trained we cannot be sued. I was told this at a CPR class. As long as you do what you are trained and don't try to perform something that a doctor would have to and say you perform the cpr and the person has a cracked rib or dies the family could not sue you because you did it to the best of your knowledge but not sure about SAR teams. But I never thought anyone would have any problems. I don't know what to say but it is distasteful to accuse a search and rescue team who is helping you of letting your son die. A team is only as good as the conditions and they help the receive from the missings family. And their training. Everyone trains in different conditions for example... myself and my group we trained last December in the IL winter in the day time.... which is totally different then the December night. I guess it really puts alot of stress on us and I want to bring this story up at our next meeting so as to show that all people don't know how much we bust our butts training and organizing but all senarios are different. Well my 2 cents. Probably what no one wanted to hear but someone has to speak!!

Mike

> Multimillion-Dollar Claim Filed By Wayments Against Searchers
>
> Gage Wayment, 2, died in the mountains near Coalville in October
2000. His
> grandmother has filed a multimillion-dollar claim against searchers.
>
> (Salt Lake Tribune 21NOV01) COALVILLE, UTAH -- The family of 2-
year-old
> Gage Wayment, who froze to death last year in the mountains where
his
> grieving father later committed suicide, has filed a multimillion-
dollar
> claim against those involved in the search for the youngster.
> Family members contend that searchers who spent six days,
starting on
> Oct. 26, 2000, scouring the mountains east of Coalville for the
child were
> "negligent," and that had they "conducted an appropriate and proper
search .
> . . Gage Wayment would have been discovered prior to his death."
> That alleged negligence caused the boy's father, Paul Wayment,
so much
> "grief and stress" that he killed himself on July 17, 2001, the
claim
> contends. The family seeks more than $1 million in damages for each
death.
> "We obviously disagree with the claim," Deputy Summit County
Attorney
> Dave Thomas said Tuesday. "The county attorney's office will
recommend
> against paying any of this claim."
> If the claim is denied, the family could file a lawsuit and ask
a judge
> to decide the issue. The filing of a claim prior to a lawsuit is
mandated by
> state law in this type of case.
> Barry N. Johnson, attorney for the Wayment family, declined to
discuss
> the issue Tuesday.
> The formal "notice of claim" was dated Oct. 26, 2001, and sent

to
> Summit, Salt Lake, Wasatch and Weber counties, which all sent
search and
> rescue crews to look for Gage Wayment.
> The Salt Lake Tribune received a copy of the notice Tuesday
from Summit
> County after filing a request under the Utah Government Records
Access
> Management Act.
> The Wayment story began Oct. 26, 2000, when Paul Wayment took
his son
> out for a ride in the mountains about eight miles east of Coalville
to scout
> for deer. The father said he left the boy alone in the truck for
about a
> half hour. Gage was gone when he returned.
> The child, whose frozen body was found six days later by a
volunteer,
> under a blanket of snow, had worn through the feet of his pajamas
trying to
> find his father.
> Paul Wayment later was charged with negligent homicide for
failing to
> take proper care of his child and was sentenced to 30 days in jail
on July
> 17, 2001. But rather than turning himself in at the Summit County
Jail, he
> killed himself near where his son's body was found.
> The claim is filed on behalf of Carol Wayment -- Paul's mother
and
> Gage's grandmother.
> "Specifically, the responsible parties failed to use well-known
and
> established search and rescue techniques and further failed to use
readily
> available technology and resources, including properly trained
dogs, in
> their search," the claim contends.
> "Additionally, the responsible parties unfairly focused their
efforts on
> Paul Wayment as a potential criminal suspect rather than focus on
locating
> Gage Wayment, thus wasting precious time and resources that could
have been
> used to locate Gage Wayment," it said.
> The mention of search dogs apparently refers to Summit County's
use of
> animals from its own relatively new search-dog program instead of
calling in
> animals from Rocky Mountain Rescue Dogs, an established private

group the
> county called in the past.

119. SAR Lawsuit (Utah) - Follow-up

Yahoo group: EMS_Amateur
Date: 2001-11-28 16:41:03 UTC
From: Garrison St.Clair
Topic: 119 Message: 119

The item below the break-line is a follow-up story on the current lawsuit involving agencies and SAR units in Utah.

Lawsuit may chill search operations

Utah sheriffs nervous over Wayment repercussions

By JOEY HAWS
Standard-Examiner staff

(28NOV01) SALT LAKE CITY -- Members of the Utah Sheriff"s Association are concerned about the potential backlash from last week"s announcement of an impending lawsuit against search and rescue workers who searched for Gage Wayment.

"Whatever comes of this action will certainly affect search and rescue efforts in Utah for quite some time," said Davis County Sheriff Bud Cox.

Cox said county sheriffs throughout the state expressed "grave concern" that if the counties named in the Wayment action -- Summit, Wasatch, Salt Lake, Weber and Davis counties -- decide to pay any amount of money to settle, it could spur other lawsuits making these mostly-volunteer teams more vulnerable to civil actions and less likely to volunteer their skills, time and equipment.

"It has all of our volunteers quite nervous about what to do if they get called into a similar situation," Weber County Sheriff Brad Slater said.

In a written statement from the Wayment family attorney, Barry N. Johnson, the family said the intent of the claim is not "to criticize their noble efforts."

"We emphasize that the Wayment family remains extraordinarily grateful to the numerous volunteers involved in the search effort," the statement said. "The primary purpose of the claim is to create the changes necessary to

insure that future search efforts are competently organized and implemented, thereby resulting in a greater number of successful searches."

Nevertheless, after the topic of the potential lawsuit was discussed at great length at the association meeting Monday, sheriffs from across the state determined to look into the potential that more claims of negligence could arise, simply because someone didn"t like the way the search was conducted.

Billy A. Stokes, search and rescue commander for the Summit County Sheriff"s Search and Rescue Team, who headed up the initial search for the child, was specifically mentioned in the claim, as was "other unknown search and rescue personnel," according to the documents.

That wording, which some volunteers feel opens the door for them to be specifically named in future actions, has made many people reluctant to go on the record to express how they truly feel about their willingness to be a part of the team.

"I"d like to tell you what I think," said one volunteer search and rescue member, who asked not to be identified. "But it"s just too touchy of a situation right now."

The attorney for the family of 2-year-old Gage Wayment and his father Paul Wayment filed two, $1 million notices of claims with the counties and county sheriff"s offices believed to have taken part in the search for the boy who became lost while in the mountains above Coalville in October 2000.

The claim alleges that "had the responsible parties conducted an appropriate and proper search of the area where (the child) disappeared, Gage Wayment would have been discovered prior to his death."

It also says that search and rescuers "unfairly focused their efforts on Paul Wayment as a potential criminal suspect" instead of immediately combing the area with search dogs or aerial searches.

That lack of action, the claim states, wasted "precious time and resources that could have been used to located Gage Wayment."

Paul Wayment later killed himself in the same mountains where his son disappeared after being sentenced to 30 days in jail of negligent homicide.

Weber County Sheriff"s Lt. Klint Anderson said he couldn"t believe it when he heard the Wayment family claimed it was the fault of the search and rescuers that caused Gage to freeze to death, after Paul Wayment left his son alone, according to some reports, for nearly 45 minutes in a truck while he went searching for deer.

"I know for us, this has been very disconcerting," Anderson said. "It"s been a real slap in the face."

Anderson said the only official action the sheriff"s office took in the Wayment case was sending a patrol car by Paul Wayment"s house to make sure

everything was OK there, plus sending police reports on the family to investigators.

"That was it," Anderson said. "We did not, in any way, send any search and rescue teams up there to assist in the search."

Cox said that if anything from the action were to come about it could also hinder the ability of teams to call on other agencies to assist. Volunteers, who mostly use their own equipment and pay their own expenses, wouldn"t be available if they throw their arms up in frustration.

"We all have to rely on one another when we have long-term events," Cox said. "So not being able to share those resources among each other would dramatically affect the work."

120. Off Topic: Holiday contacts for deployed military

Yahoo group: EMS_Amateur
Date: 2001-12-09 18:53:16 UTC
From: Garrison St.Clair
Topic: 120 Message: 120

With the holidays rapidly approaching, I thought the item below the
break-line worth passing along. Please forward it to other lists,
interested individuals and organizations.

NEWS RELEASE from the United States Department of Defense

No. 603-01
IMMEDIATE RELEASE

"ANY SERVICEMEMBER" WEB SITES ANNOUNCED
The Department of Defense announced today an alternative to the
"Any Servicemember" and "Operation Dear Abby" programs, which
were suspended indefinitely in the wake of anthrax mail attacks.

The Navy has developed a Web-based alternative to benefit
members of all Services. The program can be reached at the Navy
LIFELines Services Network at http://www.LIFELines2000.org or
http://AnyServiceMember.Navy.mil
.

Those who want to send a message of support or holiday greeting
to military servicemembers will find a simple process for
delivering messages at these sites. The "Any Servicemember"
program allows participants to select from one or all branches
of the military.

To receive a message of support, servicemembers will log onto
the Web site and choose messages for their branch of Service and
home state. Those sending a message who wish to receive a
response may include a return e-mail address. Since all
messages are viewed on the Web, the military's regular e-mail
service is not affected.

"Operation Dear Abby" was founded by the newspaper advice
columnist and has delivered mail to servicemembers overseas

during the holiday season for more than 17 years. The "Any Servicemember" mail program began during Operation Desert Storm in 1990, and continued to grow during operations in Bosnia, starting in 1995.

121. For those who responded to WTC/Pentagon/Somerset Incidents

Yahoo group: EMS_Amateur

I've been asked to pass the item below the break-line to the various responder lists. Its applicable to those of you who responded to the WTC/Pentagon/Somerset incidents in any capacity.

Your point of contact is Al Juliano; his e-mail is below as well.

The response to the American Flag decals donated by a New Jersey businessman has been tremendous. So far, we have mailed out well over two-thousand of these helmet decals to search teams, fire departments, and rescue personnel throughout the nation, who responded in some way to the WTC, Pentagon, or PA attack sites.
If your team helped in this effort, we'd be glad to send them to you for free. Please email me at: julfam@... with your name and unit, the number of decals needed, and an address. We'll try to accomodate as many requests as we can (as long as the postage money holds out).

Al Juliano, President
Mid-Atlantic Regional SAR

122. HAZMAT Info available

Yahoo group: EMS_Amateur
Date: 2001-12-20 02:13:56 UTC
From: Garrison St.Clair
Topic: 122 Message: 122

Currently NFPA - one of several national "standards making" organizations - is offering a number of HAZMAT standards documents at no cost. The weblink and brief descriptions are below.

This is not to be construed as an endorsement of NFPA. Like all organizations they have an agenda and you must determine if that agenda is one you subscribe to. However, NFPA's standards are STANDARDS because they have a wide universe of acceptance by those recognized as knowledgeable in the specific topics.

Certainly this is the opportunity to look at several accepted standards and add them to your toolbox in the most affordable way.

IEEE Standard Assists Emergency Response Teams

BY KATHY KOWALENKO
Editor, The Institute

Roadway incidents such as life-threatening accidents, fuel spills or weather-related events often require a coordinated effort by emergency medical services, law enforcement personnel, transportation crews and other public safety agencies. But these organizations' responses are often hampered by their inability to communicate and share important information with each other.

Busy phone operators relay details from distraught callers to emergency management centers, which notify fire, law enforcement or transportation command posts by telephone. Each agency enters its set of relevant data into its own independent computerized communications system.

"The majority of agencies involved in incident management cannot share data because most of the systems are proprietary and built to their agency's specifications," said IEEE member Ann Lorscheider, an Intelligent Transportation Systems program engineer at North Carolina's Department of Transportation, USA. "The problem is not that two communities are using different systems, but every agency involved with public safety across the United States is using many different systems, even in the same town. We cannot even talk on the radio to one another."

The lack of a coordinated communications system delays response time, and may cause the wrong equipment to be dispatched and more personnel than necessary sent to assist.

The U.S. Department of Transportation (DOT) realized the need to increase emergency response time with consistent, standardized communications among the nation's transportation, public safety and hazardous materials centers. As a result, the agency partnered with the IEEE to develop standards.

"When we first identified all the standards we wanted to take on as part of our initial ITS program, incident management was not one of those," said Mike Schagrin, ITS Standards manager with the U.S. DOT's Federal Highway Administration. "It was relatively late in the process that somebody started working this issue. The IEEE stepped up to the plate and has done an admirable job."

When fully deployed, the IEEE Standard for Common Incident Management Message Sets for Use by Emergency Management Centers (IEEE Std 1512-2000) will become a major component of the country's Intelligent Transportation System (ITS).

"The U.S. DOT did not want to hear from only transportation organizations because each agency's needs had to be represented. This project is far beyond just transportation. They wanted to hear from the communications specialists, and the electronics and electrical engineers," said Lorscheider, chair of the IEEE P1512 Working Group. "Because the IEEE is about building a standard through consensus, it is respected among the public safety community."

The Working Group includes representatives from rural and metropolitan law enforcement, fire, transit, transportation and emergency management agencies. According to Schagrin, many representatives are using their vacation time to work on these standards.

The base standard for message sets are discrete fields of information about the incident's details written in a uniform and open format. It can be tailored to suit the requirements of information service providers, transportation and transit management centers, and public safety and incident response agencies. Companion volumes of message set standards are being drafted specifically for traffic management (IEEE P1512.1), public safety (P1512.2), hazardous material transportation (P1512.3) and includes a data dictionary (P1512a). P1512.3 is expected to go to ballot in the first quarter of this year and will be published in the second quarter.

Using a combination of instant messaging, drop-down menus and touch screens, emergency response vehicles arriving to the scene of the incident will be able to use off-the-shelf computers to provide details about the event. This text message, along with attachments such as digital photographs, will be distributed over a network to reach multiple command centers and computer-aided dispatch systems.

Real-world deployment
With their numerous emergency service operations and transportation centers, Washington, D.C. and New York City have become test sites for the standard's early deployment.

In 1995, New York City realized the need to standardize messages from its incident management agencies. A survey conducted by the city's police and transportation departments revealed response duplication and incident reporting differences and delays, according to Ed Mark, senior transportation analyst for New York State Department of Transportation.

To improve the communication between the agencies, the New York Transportation Infrastructure Re-search Consortium began building an ITS in 1999, led by the state's Department of Transportation. New York City's Department of Transportation, Police Department, Office of Emergency Response, Fire Department and Emergency Management Systems are among the major partners.

"To develop an integrated incident management project designed to coordinate a response to incidents, using a common standard that allows messaging to all these agencies is critical," said Mark.

Forming partnerships
Because IEEE Std 1512 requires cooperation among interagency teams, partnerships are critical.

"Deployment of the ITS project in New York City is a partnership of the key first response and secondary responding agencies," said Mark. "I think 11 Sept. showed the importance of using IEEE [Std] 1512-type messages to link together those that normally are not part of transportation response incidents."

Mark, a member of the IEEE P1512 Working Group, said he insisted the standard be integrated into the ITS project. Introduced in August 2001, components of IEEE Std 1512-2000 have been built into the system along with existing communication standards.

Although the new system was not used during the 11 Sept. attacks due to technical problems, it was re-introduced in November with upgraded software and hardware that connects emergency vehicles.

Implementation will cost between US$7 million and US$8 million. But Mark said the benefits will outweigh the costs by providing information to help emergency responders quickly remove injured persons from the scene, reduce the severity and duration of incidents, and decrease the number of emergency personnel deployed.

125. Anyone on here from.....

126. Donation of Virus Protection Software (Read carefully)

Yahoo group: EMS_Amateur
Date: 2002-01-10 20:45:24 UTC
From: Garrison St.Clair
Topic: 126 Message: 126

Over the past few months the emergency response and emergency management communities have been hit hard by various forms of computer virus.

Yesterday we were able to arrange for a major developer of anti-virus software to commit to donating their products.

PLEASE READ THE INFORMATION BELOW THE BREAK-LINE CAREFULLY AND COMPLETELY BEFORE YOU CLICK ANY LINK!

Gunslinger

Gunslinger's First Law of SAR:
"SAR is for the serious, not the well meaning."

Software: AVG Anti-Virus
Manufacturer: Grisoft www.grisoft.com

Types available:

01. AVG 6.0 Free Edition - You will be able to use it without any limitations for life of the product. Free updates as well. Available to anyone via web download: http://www.grisoft.com/html/us_downl.htm

02. AVG Professional Edition - A full commercial product offering maximum virus protection, product customization and most importantly free virus database updates and free technical support for live of the product. DONATION INFO BELOW. Product info: http://www.grisoft.com/html/us_products.htm

03. AVG Professional Multilicense - A full commercial product offering maximum virus protection, product customization and most importantly free virus database updates and free technical support for live of the product. Depending on the multi-license, you can install and use the program on several computers (standalone or linked in the network). DONATION INFO BELOW. Product info: http://www.grisoft.com/html/us_products.htm

04. AVG Server - This version is aimed at protection of Windows NT/2000 servers and MS Exchange 5.0/5.5/2000, Lotus Domino, Tiny Mail and Mail602

email servers. AVG checks all mail on arrival to user mailboxes or public directories. AVG in EXS monitors changes to individual mailboxes and public directories. DONATION INFO BELOW. Product info:
http://www.grisoft.com/html/us_products.htm

DONATION INFO:

The software will be donated completely FREE. However, only to individual responders or teams, units, or organizations that are NON-PROFIT. Be fair guys/girls, if your organization is public or commercial, don't even ask. This is aimed at teams/orgs that are really struggling.

This donation has been arranged by Lynn Wilson-Pittman, Director of U.S. Operations for Grisoft. Lynn will be handling this herself. Therefore, in order to minimize the workload, it would be a courtesy for one member of any given organization to determine the needs (servers/workstations/desktops/laptops/etc) within that organization and then contact Lynn.

Also, please go to the weblinks above and determine, before you send your request, which version(s) you will need.

FAX your request, on your organizations letterhead, to: 1-530-647-0177

Attn: Lynn Wilson-Pittman, Director U.S. Operations, Grisoft Inc.

Subject: DONATED LICENSES for EMERGENCY RESPONSE ORGANIZATIONS

Message: State your team's needs, and supply a contact name and e-mail address.

Attach: A one page proof of non-profit status

FYI, here is Lynn's note to me:

"I will tell you that if the organizations you mentioned are needing virus protection, just have them send us what their needs are with a note saying I would give them the Donated license. They will not list anything about the Donation program on our site at this time, because they do not want more organizations to apply, but as I said, I'd make an exception in this case as I believe these true heroes need this support as well."
Lynn

[And please note that neither I nor INSARO have any connection with Grisoft.]

127. Grant Information for Responders

The U.S. Fire Administration is sponsoring free workshops on the 2002 Assistance to Firefighters Grant Program. Interested fire department representatives are invited to attend.
The purpose of the workshops is to explain the 2002 grant program and to answer questions.
Information will be presented on the program and on the application process. Also, general assistance in the writing of a competitive narrative for a department's grant application will be discussed.

FY 2002 GRANT APPLICANT WORKSHOP SCHEDULE

Date City Point of Contact

Additional workshops are being scheduled. Please visit the USFA web site at http://www.usfa.fema.gov/grants/02wrkshps.htm for the latest schedule information.

128. Changes in US&R; CERT; and other FEMA stuff

Yahoo group: EMS_Amateur
Date: 2002-01-31 19:23:27 UTC
From: Garrison St.Clair
Topic: 128 Message: 128

Following up on President Bush's speech, FEMA Director Joe Allbaugh sent out a "Director's Update". It is copied below the break-line.

Note the re-structuring that places US&R within the USFA (United States Fire Administration). Also read carefully the description of the CERTs.

Director's Update
January 30, 2002

A Note From the Director

Last night's State of the Union address by President George W. Bush charted a new course for FEMA. The President's First Responder Initiative, outlined in his speech to the nation, will greatly affect how we do business, where we focus our resources and energies, and how we contribute to homeland security.
President Bush's budget proposal for fiscal year 2003 will dramatically enhance the homeland security response capabilities of America's first responders. The President refers to these brave men and women as "America's Frontline Soldiers." The initiative will build on existing capabilities at the federal, state and local level. It will provide incentives to develop mutually supportive programs to maximize effective response capability. Funds are proposed to purchase equipment, train personnel and develop response plans; FEMA would be tasked with administering these funds. The president is proposing $1.1 billion to train firefighters, police officers and emergency medical technicians to improve response to chemical or biological events. The President also proposes $2 billion for new equipment, and $105 million to help local governments develop comprehensive plans to prepare for and respond to terrorist attacks.
The President has also put FEMA in charge of coordinating the new Citizen Corps, part of the newly announced USA Freedom Corps. One of the key parts of Citizen Corps is FEMA's Community Emergency Response Teams (CERTs).
The months since Sept. 11th have been ones of great change for FEMA.

Clearly, with the amount of funds proposed and the attention of the nation focused on this issue, this trend will continue. Changes within FEMA are necessary to allow us to administer the President's initiative and to meet the changing needs of our key constituencies. The following are some of the organizational changes being proposed:

. Preparedness activities will relocate from Readiness, Response and Recovery (RR&R) Directorate to the Office of National Preparedness;
. Training activities will move into the U.S. Fire Administration (USFA) to allow greater coordination between training for emergency managers and training for firefighters; and
. Authority for credentialing, training and deploying Urban Search and Rescue teams will move from RR&R to the USFA.

I know these new initiatives will pose both challenges and opportunities to the employees of FEMA. I have full faith in our ability to meet these challenges and to support the President in his efforts to safeguard our nation.

Joe M Allbaugh

Citizen Corps Web site: To find out more about the new Citizen Corps, go to www.citizencorps.gov.

FEMA given role in implementing White House Citizen Preparedness Initiatives

One part of President Bush's new USA Freedom Corps Initiative is the creation of Citizen Corps - a unification of a variety of new and existing volunteer activities run by several different federal agencies. FEMA is being given oversight responsibility for coordinating Citizen Corps and for adding additional programs, as appropriate. The existing Citizen Corps programs are:

. Neighborhood Watch, overseen by the Department of Justice;
. Volunteers in Police Service, overseen by the Department of Justice;
. Terrorism Information and Prevention System, overseen by the Department of Justice and the FBI;
. Community Emergency Response Team, overseen by FEMA; and
. Medical Reserve Corps, overseen by Health and Human Services.

Under Citizen Corps, existing programs that rely on citizen involvement and focus on crime prevention and natural disaster damage prevention, preparedness and response will be expanded to address terrorist-related scenarios. Citizen Corps will offer Americans of all ages and backgrounds an opportunity to become directly involved in safeguarding their communities. Training for members of the corps may include life-saving skills, safety information and precautions, law enforcement principles and what to do in the event of a dangerous situation. Citizen Corps will bring together local government, law enforcement, educational institutions, the private sector, faith-based groups and volunteers into a cohesive community resource.
The federal role is to provide general information, to develop training standards and materials, and to identify volunteer programs and initiatives

that support the goal of Citizen Corps.

What are Community Emergency Response Teams?

The Community Emergency Response Team (CERT) concept was developed by the Los Angeles City Fire Department in 1985. Since FEMA began this program in 1993, communities in California, Washington, Oregon, Florida, Missouri, Kentucky and other states have conducted the training.
CERT is an outgrowth of the need for people to rely on each other - rather than first responders - in the immediate aftermath of major disasters. Under this program, individuals are trained by local first responders and participate in regular disaster simulations. The first responders who provide the training are trained by FEMA or at state-held training sessions. Individuals who complete the training are better prepared to respond to and cope with the aftermath of a disaster. These trained volunteers can also collect disaster intelligence to assist professional responders with prioritization and allocation of resources during a disaster response. Under Citizen Corps, one goal is to have 400,000 CERT members trained in the next two years.

129. Commo: DoD willing to share rf band

Yahoo group: EMS_Amateur
Date: 2002-02-05 20:27:52 UTC
From: Garrison St.Clair
Topic: 129 Message: 129

The article below the break-line covers the DoD's new willingness to share spectrum with public safety users.

****
NEWS RELEASE from the United States Department of Defense

No. 056-02
(703)697-5131(media)
IMMEDIATE RELEASE
February 5, 2002
(703)697-5737(public/industry)

DEFENSE DEPARTMENT TO SHARE SPECTRUM WITH FIRST RESPONDERS

The Department of Defense today submitted its report to Congress regarding the feasibility of sharing the 138-144 MHz band with public safety users. A DoD Joint Spectrum Center engineering study identified ways sharing would be possible without interfering with DoD operations.

Deputy Assistant Secretary of Defense for Spectrum and C3 Policy Steven Price said, "We believe it is possible to share portions of the 138-144 MHz band with public safety users on a limited, coordinated basis. DoD is willing to work with National Telecommunications and Information Administration, state and local governments and first responders on a case-by-case basis to explore sharing the band for the common good."

While the 138-144 MHz band continues to be critical to DoD operations, the department has found it helpful in emergencies to share communication systems with other first responders. A small number of channels may be shared on a regional basis when it is to the mutual benefit of DoD and public safety officials.

DoD operations that would be affected if this band were interrupted through heavy use of too many channels would include

air-surface-air, air traffic control and ground support functions at military airfields, tactical communications for close air support, land mobile radios for sustaining installation infrastructure support and land mobile radios and specialized equipment for training and test range support. Other systems that would be affected include fire and security alarms, and hydrology and utility controls.

The National Defense Authorization Act for fiscal 2000 reclaimed for federal, primarily DoD, use of three megahertz in the 138-144 MHz band previously identified, pursuant to requirements of the Balanced Budget Act of 1997, for reallocation for mixed federal government and non-federal government uses. As Congress understood, the recovery of 3 MHz was and is crucial to fulfilling DoD's spectrum requirements. However, in the conference report, DoD was asked to provide a technical report assessing the feasibility of sharing the 138-144 MHz band with public safety users. In the fiscal 2001 authorization, Congress directed DoD, in cooperation with the Justice Department and the NTIA, to provide for an engineering study with regard to spectrum sharing in the 138-144 MHz band. The assistant secretary of Defense for Command Control Communication and Intelligence (C3I) has submitted this report to the Senate Armed Services Committee and the House Armed Services Committee.

Under direction of Assistant Secretary of Defense for Command, Control, Communications and Intelligence (C3I) John Stenbit, the DoD Joint Spectrum Center conducted an engineering study regarding sharing in the 138-144 MHz band. The resultant classified study showed that the areas of operation associated with the DoD frequency usage in the 138-144 MHz band encompasses nearly the entire continental United States. Large distance separations would be required to prevent co-channel and adjacent-channel interference between DoD equipment and potential state and local public safety systems, particularly in the case of DoD air-ground-air radios.

130. OLYMPIC REPORT for Emergency Responders

Wilderness medicine

It is a beautiful, chilly day in late October. You are making your descent of a moderate-sized mountain in the Mahoosuc range, on the border between Maine and New Hampshire, and your hiking partner turns his ankle, tumbles down the trail and into a cold running stream below. He is alert but wet and in extreme pain.

The ankle starts to swell and turn shades of purple. He is unable to bear any weight on it, he is wet and getting cold. The late afternoon sun is fading fast. You are miles from any roads. What do you do?

Final preparations for the 2002 Washington State SAR Conference are in process. The conference will be held May 17-19, 2002 at Wind River Fields, 8 Miles Northeast of Carson in Skamania County Washington. Pre-conference courses will begin on May 13th.

Deadline for the early registration discount is >>April 15<<.

There are over 60 classes currently scheduled plus a large number of pre-conference courses. The conference web site is <http://www.riverside-graphics.net/sar02/index.html>. There you'll find conference site info, lists of classes, maps of the area, and pre-conference courses offerings.

Registration info is available on the web site. If you have additional questions contact me at <c.long@...> or Skamania County Deputy Sheriff Dave Brown at <daveb@...>.

See you there!

140. FEMA Seeks Input On First Responder Grants Program

Yahoo group: EMS_Amateur
Date: 2002-04-25 16:44:14 UTC
From: Garrison St.Clair
Topic: 140 Message: 140

Not long ago on several lists there were extensive discussions of what constitutes a "First Responder". Those discussions arose out of concerns about the distribution of grant monies. Below the break-line is an announcement from FEMA. They are seeking input on the entire "First Responder Grants Program". Note that they ask for input on the "definition" of First Responder.

If this issue is important to you or your organization, there is about three weeks to add your comments to this issue.

FEMA Seeks Input On First Responder Grants Program

Release Date: April 23, 2002
Release Number: 02-036

Washington, DC -- The director of the Federal Emergency Management Agency (FEMA), Joe M. Allbaugh, announced today that as part of a preliminary process, FEMA is seeking ideas on the design of a first responder grants program and process for providing $3.5 billion to state and local responders to help them prepare for terrorist attacks.

The funding, requested in President George W. Bush's FY 2003 budget, would include grants for planning, training, exercises and equipment for responding to acts of terrorism. While Congress has not acted on the President's budget proposal, FEMA wants to be ready if the funding is approved.

The agency requested written comments in a notice published in the Federal Register on Tuesday, April 16. The Federal Register notice follows a listening session with first responders and representatives of first responder and emergency management organizations from around the country that took place April 10-11 in Washington, D.C.

The listening session involved over 50 representatives of the state and local responder community, including fire service, law enforcement and emergency medical personnel as well as state and local emergency management. In addition to FEMA, officials representing the Office of Homeland Security, the Office of Domestic Preparedness at the Department of Justice, and the Department of Health and Human Services also participated in the one-and-a-half day session.

Discussion at the meeting centered on possible conditions of the grants, the appropriate definition of 'first responder,' factors to be considered in deciding allocation formulas, and effective grant mechanisms. The session was the first in a series to be organized by FEMA's Office of National Preparedness (ONP), which has been asked to implement the First Responder Initiative.

President Bush established FEMA's Office of National Preparedness in May 2001 to address the critical need for a central coordination point for the wide range of federal programs dealing with terrorism preparedness. ONP's mission and overriding objective is to help state and local emergency responders be prepared to handle the consequences of acts of terrorism.

ONP specifically is looking for ideas and recommendations on ways that state and local governments can collaborate in a planning process that builds on existing emergency response plans and strengthens first responders' ability to respond to acts of terrorism. FEMA envisions a planning process that sees local response plans and first responder capability-building as part of a broader state strategic plan. In addition, ONP is seeking suggestions regarding eligibility criteria and factors that should be considered when determining how much grant recipients should receive.

Written comments must be received by May 16, 2002, and may be mailed to Rules Docket Clerk, Office of the General Counsel, Federal Emergency Management Agency, 500 C Street S.W., Washington, D.C., 20472; faxed to the Office of the General Counsel at 202-646-4536; or e-mailed to OGC at rules@....

Fujita Tornado Damage Scale

Tornadoes are rated from F0 to F5 on the Fujita scale, based on wind speed and damage. The scale was developed by Theodore Fujita of the University of Chicago.

F0: Light damage, winds under 73 mph. Some damage to chimneys, branches broken off trees, shallow-rooted trees pushed over, sign boards damaged.

F1: Moderate damage, winds 73-112 mph. Surfaces peeled off roofs, mobile homes pushed off foundations or overturned, moving autos blown off road.

F2: Considerable damage, winds 113-157 mph. Roofs torn off frame houses, mobile homes demolished, boxcars overturned, large trees snapped or uprooted, light objects become missiles.

F3: Severe damage, winds 158-206 mph. Roofs and some walls torn off well-constructed houses, trains overturned, most trees in forest uprooted, heavy cars lifted off ground and thrown.

F4: Devastating damage, winds 207-260 mph. Well-constructed houses leveled, structures with weak foundations blown off some distance, cars thrown, large missiles generated.

F5: Incredible damage, winds 261-318. Strong frame houses lifted off foundations and swept away, automobile-sized missiles fly through the air more than 100 yards, trees debarked.

145. Telecast: "Emergency Responders and Communicable Disease" 01MAY02

EENET Presents:

"Emergency Responders and Communicable Disease:
Management Issues - Part II

May 1, 2002 2:00-3:00 p.m. EASTERN TIME

This program is the last in the three-part series. It addresses the organizational issues, management requirements, and policies related to occupational exposure to communicable diseases. Using interviews with experts, panel discussions, and questions from the on-stage audience, the broadcast will look at the issues, policies, and procedures surrounding communicable diseases, including data collection and interpretation. Again, the majority of the discussion and information will address Hepatitis C, although the subject matter will consider Hepatitis B and HIV as well.

Both Management Part I & Part II of this series will include critical information for policymakers, and department administrators, as well as first responders.

SATELLITE INFORMATION:

****
The National Academy Press of the National Academy of Science has placed all of their books on line for free access. The selections below pertain to terrorism.

These books are all free to read online. Click on the cover images and follow the links to examine individual titles, or visit the NAP's searchable collection on the science and policy issues surrounding terrorism and security, http://www.nap.edu/terror/.

Here are just a few synopsis of about 28 publications:

"Airline Passenger Security Screening:New Technologies and Implementation Issues"
Airline Passenger Security Screening addresses new technologies being considered by the Federal Aviation Administration (FAA) for screening airport passengers for concealed weapons and explosives. This book discusses issues such as privacy, legal concerns, and possible adverse health effects from these devices, all of which affect public and airline industry acceptance of new technologies for passenger screening.

"Blast Mitigation for Structures: 1999 Status Report on the DTRA/TSWG Program"
The Blast Mitigation for Structures Program (BMSP) is a research and development activity conducted by the Defense Threat Reduction Agency (DTRA) to improve the performance of buildings that are targets of terrorist attack. The primary goal of the BMSP is to reduce loss of life and injuries to the occupants of these buildings through the development of innovative techniques for new structures and retrofitting existing facilities. The committee's findings and recommendations are contained in this initial

assessment report.

"Detection of Explosives for Commercial Aviation Security"
Detection of Explosives for Commercial Aviation Security advises the Federal Aeronautics Administration (FAA) on the detection of small, concealed explosives that a terrorist could plant surreptitiously on a commercial airplane. The book identifies key issues for the FAA regarding explosive detection technology that can be implemented in airport terminals. Recommendations are made in the areas of systems engineering, testing, and technology development.

"Assessment of Technologies Deployed to Improve Aviation Security: First Report"
This report assesses the operational performance of explosives-detection equipment and hardened unit-loading devices (HULDs) in airports and compares their operational performance to their laboratory performance, with a focus on improving aviation security.

&nb sp;
?The most effective
anti-aging therapy.?

Dr. Thierry Hertoghe, President of the European Academy
for Quality Life and Longevity Medicine

After the age of twenty-one, your body slowly stops releasing an important hormone known as HGH (Human Growth Hormone). The reduction of HGH, which regulates levels of other hormones in the body (including testosterone, estrogen, progesterone, and melatonin) is directly responsible for many of the most common signs of growing old, such as wrinkles, gray hair, decreased energy, and diminished sexual function. Fortunately, clinical evidence shows that by elevating HGH using 100% Natural GHR15 we can significantly reduce, and even reverse, the symptoms of aging. GHR15 has no known side effects; GHR15 costs far less than Injection Drugs; is safe, effective and laboratory tested.

Until now, HGH therapy was a costly and even dangerous treatment, available only to celebrities and the very wealthy. With the introduction of GHR15, it is now affordable!. For less than a fraction of the cost, GHR15 naturally increases HGH levels in your body.

In fact, we are so confident in GHR15 that we offer an unconditional, no-questions-asked, 60 day money back guarantee. You risk nothing to try GHR15! Plus you'll AUTOMATICALLY save 5% when you order today!

If you are already one of our satisfied customers, congratulations! May you live a long and healthy life with GHR15!

Benefits of GHR15

- Rejuvenate your body and mind
- Feel younger
- Look younger
- Reduce wrinkles
- Restore your sex drive
- Revitalize your Heart, Liver, Kidneys & Lungs

more Benefits (http://pureghr15.com/benefits.htm)
(http://www.pureghr15.com/faq.htm)
(http://pureghr15.com/order.htm)

Doctor's Agree...GHR15 will change the way you look and feel!
?Hormone replacement therapy (GHR15) is the best and most effective anti-aging medical therapy of the moment.?
- Dr. Thierry Hertoghe

In over 40 years of practicing orthomolecular medicine, I have never seen anything that approaches the positive results seen with GHR15.?
- Dr. Don E. Johnson - President of the American Anti- Aging Society

Our Promise to you:
Take Pure GHR15 for 60 days and if you are not satisfied,simply return the un-used portion of GHR15 and we?ll refund your money with no questions asked.

Barbara T. Wisniewski Biehn
Training Program Analyst
Office for Domestic Preparedness
Phone: 202-353-0281
Pager: 877-858-9235
Fax: 202-616-2922
Email: wisniews@...

Good morning all

The secondary device video is available through the
Office for Domestic Preparedness. www.ojp.usdoj.gov/odp

Synopses of that video and two others follow below. Also currently in production are videos on Incident Command, Unified Command, and Responding to a WMD/HazMat Crime Scene. These are in addition to the monthly CoMNET and Live Response programs that DOJ co-sponsors with TSWG and FEMA. http://www.ojp.usdoj.gov/odp/docs/comnet.htm

You may access all ODP resources through the helpline number below:
ODP Help Line - 1-800-368-6498

ODP also operates an information clearinghouse with a virtual library of information and resources, including abstracts, publications, videos, articles, templates, models, samples, and links to other sites. You may access the clearinghouse at http://odp.ncjrs.org

You may order up to 5 copies each of the videos through the DOJ Response Center at 1-800-421-6770
For those who require than 5 copies, please fax a request on letterhead to 202-616-2922, please label VIDEO REQUEST

Surviving the Secondary Device - the Rules Have Changed
Video

Produced in partnership with the Georgia Emergency Management Agency, this video is designed to assist public safety officials in making informed decisions concerning the real potential of secondary explosive devices. These devices, which detonate after the initial explosion, target blast survivors, other individuals who converge on the scene, and, more often, responding public safety personnel. The possibility of secondary devices require that public safety officials not only look at how to protect the lives our citizens, but how to protect the responders. This video discusses policies and procedures for effectively responding to and managing a bomb incident, and for better ensuring the safety of the public and the emergency responder.

Surviving Weapons of Mass Destruction
Video

The threat of terrorist incidents involving chemical or biological agents is very real. This training video is designed to enhance the survival and safety of emergency responders during such incidents. Although protecting the public is the principal mission of all public safety agencies, it is also important that emergency responders do not forget their own safety. This video, produced in partnership with the Georgia Emergency Management Agency, approaches safety from the individual responder and an agency perspective.

Weapons of Mass Destruction - the First Responder
Video

Being prepared for incidents involving weapons of mass destruction means knowing what to look for and how to react. Preparation means

that all emergency response agencies, including law enforcement, fire, emergency medical services and others, at all levels of government, work together in responding to such events. This video, produced in partnership with the City of Seattle Fire Department, was prepared to familiarize emergency responders with steps they can take to mitigate the effects of such incidents and to better ensure their own and the public's safety.

Hope this info is helpful.

Regards,

Barb

150. Recognition in the aftermath of the WTC

Yahoo group: EMS_Amateur
Date: 2002-05-30 23:05:16 UTC
From: Garrison St.Clair
Topic: 150 Message: 150

Several months back, many of the SAR, Emergency Management, and other related lists discussed Rick Rescorla and the role he played in saving lives at the WTC on 11 September.

To refresh your memory, here are several links:
http://www.lzxray.com
http://www.washingtonpost.com/ac2/wp-dyn?pagename=article&node=&contentId=A56956-2001Oct26

We often forget theses things.

Earlier today I received a note about recognition for Rick Rescorla from an acquaintance in Emergency Services in the UK. The note is copied below the break-line. I've followed through I hope many of you will do so as well.

Thanks.

ARRL RECEIVES HOMELAND SECURITY TRAINING GRANT

The ARRL will receive a $181,900 homeland security grant from the US government to train Amateur Radio operators in emergency communication. The League was among several dozen nonprofit organizations designated to receive some $10.3 million in federal money to boost homeland defense volunteer programs. The grant, from the Corporation for National and Community Service special volunteer program, will provide free ARRL Amateur Radio Emergency Communications Course training to 5200 volunteers nationwide, starting in 2003.

"ARRL is the national association for Amateur Radio and is the national leader in emergency communications by volunteers who operate their own equipment on their time at no cost to any government, organization, or corporation," said the July 19 announcement from Homeland Security Director Tom Ridge. The ARRL plans to revise and update the emergency communications curriculum to incorporate additional elements of emergency preparedness and homeland security.

ARRL President Jim Haynie, W5JBP, said he was extremely pleased by the news. "This adds legitimacy to the public service work Amateur Radio has been doing for years," he said.

ARRL Chief Development Officer Mary Hobart, K1MMH, applied for the funding in May, inviting the Corporation for National and Community Service to become "a partner with the nation's oldest volunteer radio communications organization."

"I think this is an extraordinarily exciting day for Amateur Radio that the role of Amateur Radio in homeland security is recognized at the highest levels of government," Hobart said upon learning of the grant. The

League's grant application characterized Amateur Radio as "the bedrock of communications when other outlets fail."

Citing Amateur Radio's response in the aftermath of the September 11 terrorist attacks, Hobart said the federal grant "will help continue our work in providing public service and to protect lives, homes, businesses and our frequencies, as we have for decades."

The League had sought a three-year grant of $541,750. The $181,900 grant covers the first year's direct program costs. The proposed budget includes the cost of a project coordinator who would be responsible for overall fiscal management of the grant.

ARRL Chief Executive Officer David Sumner, K1ZZ, said he was pleased that the League would be able to extend its Amateur Radio Emergency Communications program to thousands of amateurs who might otherwise not be able to afford the program. "We hope all who are interested will get on board," he said.

The grant announcement said that "expanding the opportunities for Americans to participate in meaningful volunteer service" is at the heart of President George Bush's USA Freedom Corps, of which the Corporation for National and Community Service is a part.

"We are deeply grateful to Tom Ridge and to the Corporation for National and Community Service for providing Amateur Radio with a unique opportunity to serve our country," Hobart said.

In June, the ARRL and United Technologies Corporation announced a partnership to provide free ARRL Amateur Radio Emergency Communications Course training for up to 250 Connecticut amateurs.

Hello All,

RE: WTC SHIRTS/ JACKETS - NEW DESIGNS

Just wanted to share some info on products that I recently purchased. They are really nice. The detailed embroidery is so neat and clear. Please dont take this email the wrong way. Just for info purposes, sorry to bother anyone who hates this type of mail. I included two jpeg's from the site of the new logo's take a look. If you cant open go right to the site. The images are much more clear on the site. If anyone is interested in other sites that sell 911 items let me know.

WWW.NYCHEROSHIRTS.COM

Thanks

Miami Residents Train for Disaster

MIAMI (AP 10SEP02) - The next time disaster strikes, help doesn't necessarily have to arrive when firefighters or police officers do. Critical aid might just as well come from a neighbor or a co-worker.
More than 1,500 Miami-Dade County residents have been trained by professional rescue workers to respond if a hurricane hits, terrorists attack or another catastrophe occurs.

The volunteers are trained as Community Emergency Response Teams, groups of 6 to 11 people from a workplace, church or neighborhood who learn to assess disaster sites, put out small fires, give basic emergency medical care and perform searches and rescues.

Their assistance would especially be needed in a disaster, where professional rescue crews might be so busy they might not get to a particular site right away.

"They need to be self-sufficient because the resources may be overwhelmed in a disaster," said Capt. Bob Palestrant, the program's coordinator. The groups "may have to be on their own for a matter of hours up to days, depending on the situation."

The program began in Los Angeles in 1985 to train people to help after earthquakes. California officials wanted to avoid a tragedy like in Mexico City, where 100 untrained volunteers died trying to save earthquake victims.

Now the community teams are in more than 40 states, which have tailored the program to address local threats, such as hurricanes in Florida and tornadoes in the Midwest. The Federal Emergency Management Agency uses the

program as a model for local governments to train their residents.

Miami-Dade's Emergency Management Office began training teams in 1997 and officials expect to have 2,000 people certified by January. Although the teams haven't been tested by catastrophe, some of volunteers have used their training.

Bryan Lanois pulled an 11-year-old neighbor girl from a canal and - using the CPR training he received less than 3 weeks earlier - revived her before the fire department arrived.

His training "made that girl very, very lucky," Lanois said.

Another Miami trainee was visiting the World Trade Center for business last Sept. 11. After escaping, she assisted police by ushering people away from the second tower minutes before it collapsed, Palestrant said.

After a day of instruction in a gray trailer, volunteers put on hard hats and garden gloves to try out their skills on the training site for the county's Urban Search and Rescue Team - a world-renowned group that has been sent to Turkey to find victims buried in the 1999 earthquake rubble and assisted at the World Trade Center and Pentagon last year.

To tame a fire blazing in an outdoor concrete oven, the volunteers are taught to work in pairs, one in front with the fire extinguisher and the other behind, with a hand on their partner's shoulder. The fire extinguisher should be pointed at the base of the fire - not the flames - and should be pointed downwind if possible.

"I was surprised by the heat and the awkwardness of the fire extinguisher," said Lori Pagan, a first-grade teacher at Sacred Heart Catholic Elementary School. "I think I was afraid of it."

That's what the trainers - firefighters and Urban Search and Rescue Team members - are trying to address.

"We want them to have the confidence to know they can do it," Palestrant explained.

To rescue a child trapped under heavy debris - in this case a child-sized mannequin - they are taught to use pry bars as levers to raise more than a ton of concrete. Then they prop up the concrete on wooden blocks and slide, not lift, the dummy onto a backboard.

The volunteers can learn how to treat snake bites, perform CPR and prepare their houses for hurricanes. They also perform mock search and rescues, with half of the class pretending to be victims in the twisted metal and concrete heap used for training the pros.

The rescuers form triage teams and fill out casualty reports for each victim to help the medical crews when they arrive.

Mary Preston, principal of Sacred Heart, said her staff wanted the training because they worried about their proximity to the Turkey Point Nuclear Plant. They also wanted to be prepared if a hurricane struck: Hurricane Andrew ripped off the school's top floor 10 years ago.

"We've been exposed to a lot of really good information," Preston said. "We can apply it to a tornado or terrorism, at school or at home."

I'll presume that among the subscribers to this list, all have had some sort of first aid training.

However, if I'm wrong, for those of you who'd like an introduction to the topic, or would like to take an "on-line" refresher - free of charge - the following may be of
interest:

"The National Safety Council is recognizing September 11th by offering its online Basic First Aid and CPR Training Program free of charge from September 11-18. Go to this link for further information:
http://www.nsc.org/firstaid/index.htm "

Its a good use of two hours of your time!

(and please forward this e-mail to any local lists)

Europe Tests Satellite System for Disaster Medicine

LONDON (Reuters Health 12NOV02) - The European Space Agency is developing a new satellite system to allow emergency workers in a disaster zone to get expert help treating patients when mobile and land-based communications are struck down.

A trial run of the system in southern Germany late last week showed the DELTASS (Disaster Emergency Logistics Telemedicine Advanced Satellites System) works well, and negotiations are under way to get it into use, the agency said on Tuesday.

DELTASS uses geostationary and low earth orbit satellites. It allows central management of emergency workers scattered around a disaster zone and lets medical experts hundreds of miles away help with the diagnosis of casualties.

This communication system could be especially useful when existing communications networks are affected, said Francesco Feliciani, DELTASS project manager at the European Space Agency.

"A major accident does as much invisible as visible harm," he said in a statement. "Apart from the damage to terrestrial communications infrastructure done by the likes of an earthquake or floods, the first thing that becomes unavailable is the cellular network, which quickly gets overloaded."

The space agency said search and rescue workers entering a disaster area to identify casualties could use palm-held computers and satellite phones to transmit patient details, opening electronic forms that record injuries and treatments.

Also, first aid and ambulance teams could use portable workstations to communicate with experts at a field hospital set up within the disaster zone, allowing patient data such as ECGs and images of injuries to be transmitted.

"Most of all, DELTASS allows us to 'follow' each patient from his first contact with the search and rescue team through the quite complex chain of events that characterises the diagnostic and therapeutic intervention, distributed over time and space," Feliciani said.

During the trial of the system, a mock field hospital was set up in the town of Ulm, together with search and rescue teams and a mobile ambulance. The satellite system was used to communicate the symptoms of "victims," played by actors, to a hospital in Berlin, standing in as a second opinion reference hospital.

The DELTASS project began in July 2001 and involves a range of hardware and software elements, Feliciani noted.

"Now, following this demonstration, we are negotiating with the DELTASS team to launch a co-funded project to bring it to a real utilisation phase, to be operated by real users for actual emergency cases," Feliciani explained.

"The idea is to move forward to a sort of pilot operation phase lasting a few months, where the system would be put into actual practice," Feliciani told Reuters Health. "This is something we are negotiating about and I think in a couple of weeks we should be able to confirm going ahead."

The project receives funding from the French and German space programs, but it would not be limited to those countries, said Feliciani. "It is probably limited to Europe so far due to satellite coverage, but eventually you could look further."

Strengthening the effectiveness and coordination of international urban search and rescue assistance: draft resolution

A/57/L.60
General Assembly
Fifty-seventh session
Agenda item 21 (a)

Strengthening of the coordination of humanitarian and disaster relief assistance of the United Nations, including special economic assistance: strengthening of the coordination of emergency humanitarian assistance of the United Nations

Afghanistan, Albania, Argentina, Australia, Austria, Azerbaijan, Canada, Chile, Colombia, Croatia, Czech Republic, Denmark, Egypt, Georgia, Germany, Greece, Guatemala, Hungary, Iceland, India, Italy, Japan, Lesotho, Luxembourg, Malaysia, Malta, Mexico, Monaco, Netherlands, New Zealand, Nicaragua, Norway, Peru, Poland, Portugal, Republic of Korea, Republic of Moldova, Romania, Russian Federation, Slovakia, South Africa, Spain, Sweden, Switzerland, Tajikistan, the former Yugoslav Republic of Macedonia, Tunisia, Turkey, United Kingdom of Great Britain and Northern Ireland and United States of America: draft resolution

Strengthening the effectiveness and coordination of international urban search and rescue assistance

The General Assembly,

Reaffirming its resolution 46/182 of 19 December 1991, which contains in its annex the guiding principles for strengthening the coordination of humanitarian assistance of the United Nations system, and its resolutions 54/233 of 22 December 1999, 55/163 of 14 December 2000, 56/103 of 14 December 2001 and 56/195 of 21 December 2001, and recalling agreed conclusions 1998/1 and 1999/1 of the Economic and Social Council and its resolution 2002/32 of 26 July 2002,

Taking note of the report of the Secretary-General on international cooperation on humanitarian assistance in the field of natural disasters, from relief to development,1

Deeply concerned by the increasing number and scale of disasters, resulting in massive losses of life and property worldwide, as well as in long-term consequences, especially severe for developing countries,

Reaffirming that the sovereignty, territorial integrity and national unity of States must be fully respected in accordance with the Charter of the United Nations. In this context, humanitarian assistance should be provided with the consent of the affected country and in principle on the basis of an appeal by the affected country,

Reaffirming also that each State has the responsibility first and foremost to take care of the victims of natural disasters and other emergencies occurring on its territory. Hence, the affected State has the primary role in the initiation, organization, coordination and implementation of humanitarian assistance within its territory,

Recognizing the importance of the principles of neutrality, humanity and impartiality for the provision of humanitarian assistance,

Emphasizing the responsibility of all States to undertake disaster preparedness and mitigation efforts in order to minimize the impact of disasters,

Noting the critical role played by local rescuers in natural disaster response as well as existing in-country capacities,

Emphasizing the importance of timely, coordinated and technically sound international assistance provided in close coordination with the receiving State, in particular in the field of urban search and rescue following earthquakes and other events resulting in structural collapse,

Noting with appreciation, in this respect, the important contribution made by international urban search and rescue teams in the aftermath of disasters, which helped to reduce loss of life and human suffering,

Commending the work of the United Nations Disaster Assistance and Coordination teams in facilitating rapid need assessments and assisting Member States to organize the on-site coordination of international urban search and rescue operations,

Concerned about the procedural requirements applicable to movement of foreign nationals and equipment to and within a country that may impinge on

the timely acceptance, deployment to the disaster site, and activities of international urban search and rescue teams,

Also concerned that an additional burden may be placed on the resources of the affected countries by those international urban search and rescue teams which are inadequately trained or equipped,

Noting the efforts made by Member States, facilitated by the Office for the Coordination of Humanitarian Affairs to improve efficiency and effectiveness in the provision of international urban search and rescue assistance,

Noting also that the International Federation of Red Cross and Red Crescent Societies is identifying the current state of international law relating to disaster response for a report to be presented to States and national Red Cross and Red Crescent societies at the International Conference of the Red Cross and Red Crescent in December 2003, and emphasizing the need for intergovernmental oversight of this process, particularly with regard to its principles, scope and objectives,

Recognizing, in this regard, the Guidelines developed by the International Search and Rescue Advisory Group, as a flexible and helpful reference tool for disaster preparedness and response efforts,

1. Stresses the need to improve efficiency and effectiveness in the provision of international urban search and rescue assistance, with the aim of contributing towards saving more human lives;

2. Encourages efforts aiming at the strengthening of the International Search and Rescue Advisory Group and its regional groups, particularly through the participation in its activities of representatives from a larger number of countries;

3. Urges all States, consistent with their applicable measures relating to public safety and national security, to simplify or reduce, as appropriate, the customs and administrative procedures related to the entry, transit, stay and exit of international urban search and rescue teams and their equipment and materials, taking into account the Guidelines of the International Search and Rescue Advisory Group, particularly concerning visas for the rescuers and the quarantining of their animals, utilization of air space and the import of search and rescue and technical communications equipment, necessary drugs and other relevant materials;

4. Also urges all States to undertake measures to ensure the safety and security of international urban search and rescue teams operating in their territory;

5. Further urges all States that have the capacity to provide international urban search and rescue assistance to take the necessary measures to ensure that international urban search and rescue teams under their responsibility are deployed and operate in accordance with internationally developed standards as specified in the Guidelines of the International Search and Rescue Advisory Group, particularly concerning timely deployment,

self-sufficiency, training, operating procedures and equipment, and cultural awareness;

6. Reaffirms the leadership role of the United Nations Emergency Relief Coordinator in supporting the authorities of the affected State, upon their request, in coordinating multilateral assistance in the aftermath of disasters;

7. Encourages the strengthening of cooperation among States at the regional and subregional levels in the field of disaster preparedness and response with particular respect to capacity-building at all levels;

8. Also encourages Member States, with the facilitation of the Office for the Coordination of Humanitarian Affairs and in cooperation with the International Search and Rescue Advisory Group, to continue efforts to improve efficiency and effectiveness in the provision of international urban search and rescue assistance, including the further development of common standards;

9. Requests the Secretary-General to submit to the General Assembly at its fifty-ninth session, a comprehensive, updated report with recommendations on progress in the improvement of efficiency and effectiveness in the provision of international urban search and rescue assistance, taking into account the extent of utilization of the Guidelines of the International Search and Rescue Advisory Group.

Washington, DC -- The Federal Emergency Management Agency (FEMA) announced the availability of a new publication to help individuals prepare themselves and their families for disasters. Are You Ready? A Guide to Citizen Preparedness (FEMA publication H-34) brings together facts on disaster survival techniques, disaster-specific information, and how to prepare for and respond to both natural and man-made disasters.

Are You Ready? provides a step-by-step outline on how to prepare a disaster supply kit, emergency planning for people with disabilities, how to locate and evacuate to a shelter, and even contingency planning for family pets. Man-made threats from hazardous materials and terrorism are also treated in detail. The guide details opportunities for every citizen to become involved in safeguarding their neighbors and communities through FEMA's Citizen Corps (www.citizencorps.gov) initiative and Community Emergency Response Team training program.

The interest in disaster preparedness has increased dramatically since the terrorist attacks on September 11. Are You Ready? is designed to help Americans take responsibility and get prepared by having a plan in place to protect your family and your home or business.

"Taking personal responsibility for the safety of our families, our neighbors and our nation is critical to ensuring damages and losses from disasters are limited," said FEMA Director Joe M.

Allbaugh. "Every American needs to participate in preparing their families so that we - as a nation - are all better prepared."

"Everyone needs to know how to respond to any disaster that could occur in their communities. That includes both natural disasters such as floods, hurricanes, earthquakes and tornadoes - as well as manmade disasters such as terrorism and accidents involving hazardous materials," said Allbaugh.

For more information and an online copy of Are You Ready, visit www.fema.gov/areyouready. Also, for more information on preparedness, visit www.fema.gov/library. The online emergency checklist is another way FEMA is working to make America "A Nation Prepared."

I've got a trainee where I'm from, and he tends to be a little "hyper" going to calls - he is so enthusatic that he is on the ambulance before the rest of get out of the rec room :) Hes been with ous for a couple of months, and just past his EMT last month. I'm worried about someone making him a primary and him screwing up. and suggestions, guys? Jon N3VZG

Tell him he should calm down due to the fact i have had some friends tell me that they have seen first hand people that where all hyper and did hurt someone reallll bad. Or they may end up hurting them selves also.. I used to be that way myself but we all learn real quick to chill out. lol..And iam a volly..

Thanks Bill. I am wodering if you or anyone else on the list has suggestions as to exercises, or SOMETHING I can give him to do that gives him a chance to calm down - I never had the probelm, so I have NO CLUE as to ideas or suggestions, and I really like the guy and don't want to see him get himself in trouble the first time the s@*t hits the fan and he's in charge. Thanks, Jon

If your department does any community service such as blood pressure checks, inspections, kid safety, etc. That would be a good assignment for him, or perhaps special events in the area like parades where he'll get more patient contact to mellow out, rather than learning on the scene of an emergencies over time.

Bill, many years ago I was that over eager member, and for me it was the Senior EMTs talking to me and providing me guidance and explaining how rushing sometime leads to diaster. Over the pase 26 years I have truly learned that haste does make waste. I would capture that engery and channel it into a more useful avenue. As my Daddy use to say, "When you got a live wire you need to ground it!"

Bill Askes,

I have aquestion for all just curious does anybody use there ham radios for calls or work or what have you??

K C replies-
I have used the Ham on one call that involved a Greyhound Bus accident, all the units left the scene and I counld not rase the base so I went to my ham and using the phone patch I made contact and recieved the extra help I was needing. I was told that this would be considered an emergency and allowed for business on the amature frequency. Take care! Stay safe! Have a happy EMS week May 21st.

I have a TH-F6a and have for a couple of years. It is a far superior radio to the VX5R when you compare the receiver sensitivity on public service frequencies. That said, we get back into the FCC Commercial type-acceptance deal. This radio, while having the ability to be modified to txmit on your public service (work) frequencies, is not type-accepted to do so under commercial service (i.e. illegal). Many people will say, well if it will work there, it's OK, and maybe for everyday ops it would be and without getting hassled it might be. Just once someone needs their radio in an emergency, doesn't have a type-accepted radio and the Kenwood or Yeasu or Icom doesn't work right and the medic, a patient, or co-workers dies; watch the sh*t hit the fan.

This is my opinion - period. Flame me if you have more radio experience than I (32 years Extra Class) or EMS (31 years having been one of the USA's first Paramedics) or want to debate it. The fact remains because it can do it doesn't make it right or legal.

Gee Bill, a bit thin skinned or what?

You asked about using the radio in a way it is neither designed nor certified. Sorry if I scared you but the subject of using these non-commercial non-type accepted radios in EMS/FD/PD service has been discussed at length, many times, and on several different boards. By your call, I'd venture to say you're both a new ham and maybe new to EMS as well, I'm not and just trying to lead you in the right direction. If you can't or won't see my post as that, fine. Who care's - really.

This radio, while having the ability to be modified to txmit on your public service (work) frequencies, is not type-accepted to do so under commercial service (i.e. illegal). Many people will say, well if it will work there, it's OK, and maybe for everyday ops it would be and without getting hassled it might be. Just once someone needs their radio in an emergency, doesn't have a type-accepted radio and the Kenwood or Yeasu or Icom doesn't work right and the medic, a patient, or co-workers dies; watch the sh*t hit the fan.

This is my opinion - period. Flame me if you have more radio experience than I (32 years Extra Class) or EMS (31 years having been one of the USA's first Paramedics) or want to debate it. The fact remains because it can do it doesn't make it right or legal.

I am far from new to the ems services.. And fire for that matter I am however new to the ham radio aspect.. I was asking if anyone used it in an emergency form if they had nothing else available to them and I am not thin skinned far from it.. I have probably been through a heck of a lot more than you have I do not need anyone telling me how to do stuff correctly, as I am 30 years old..

Gee Bill, a bit thin skinned or what?

You asked about using the radio in a way it is neither designed nor certified. Sorry if I scared you but the subject of using these non-commercial non-type accepted radios in EMS/FD/PD service has been discussed at length, many times, and on several different boards. By your call, I'd venture to say you're both a new ham and maybe new to EMS as well, I'm not and just trying to lead you in the right direction. If you can't or won't see my post as that, fine. Who care's - really.

I have a TH-F6a and have for a couple of years. It is a far superior radio to the VX5R when you compare the receiver sensitivity on public service frequencies. That said, we get back into the FCC Commercial type-acceptance deal. This radio, while having the ability to be modified to txmit on your public service (work) frequencies, is not type-accepted to do so under commercial service (i.e. illegal). Many people will say, well if it will work there, it's OK, and maybe for everyday ops it would be and without getting hassled it might be. Well here is what you wrote and no-where do I see any reference to emergency situations. you wrote: " when i ask before about if anybody uses there radios for work or call's i meant on your ! freqs fo r work or ems calls. Thanks all....
Bill
KC2KUY"

Excuse me if I missed something. In an emergency you can use any radio, and any frequency.

Not to turn this exchange into a pissin' contest but I do tend to doubt you've seen more than I in EMS quite frankly. I was literally working a 911 EMS Paramedic unit in NYCEMS when you were born, some 40 or 50,000 911 calls ago.

No matter, have a good life.

199. Well....

Yahoo group: EMS_Amateur
Date: 2003-05-06 23:51:37 UTC
From: Glen Jackson
Topic: 199 Message: 199

It is good in some ways to see the group active.... Unfortenetly arguing. I have been on this group for quite awhile, and one of my 1st questions I asked was about either a Alinco DJ-560 / 580, or Yaseau FT-50's capability to be used in EMS... I must say I got pretty much the same answers... It is true it is "Illegal" however I have known persons who have and do use ham radios for that purpose.... I think allot of that had to do with $$$, it is too expensive for an individual to but thier own radio, and they turn to ours. Personally when I first started in EMS I thought it might be a good idea. I soon found out that the radios output was usually (HT's) to low to key a repeater in the Tennessee Valleys..... Now I am in Dekalb GA and we are all one big happy trunked system family, so it would be of no use at all...

I honestly dont have a opinion either way. Just hoping that we can all play nice and share two of our passions (Radio & EMS) together....

Is anyone on here from Atlanta area?

Also how did you manage to become a D.C. (Doctor of Chiropractor). Usually most medics go on to R.N.'s or P.A.. I have thought of going to D.C. school here in Atlanta but the school is experienceing some diffucultys....Has anyone else advanced past EMS to another career? Please share.

I have a question. I don't want to interrupt a discussion. Are there any Mississippi EMTs in the group? I have been through the BASIC course and passed. My problem is this... I am currently deployed overseas with the Army. Is there any way I can request the test here? Will it be effective in Ms? Will any EMT training I receive over here widen my scope of practice? I know another EMT-I(?) in my radio club, I will have to get him into the group. OKAY, okay, okay, it is more than one question. Can anyone help?

From: kb3dlp
Topic: 202 Message: 202

Hello,
My name is Jeremy, I'm an EMT in Philadelphia and currently work for Temple's Transport Team on the Critical Care Truck. I currently hold a Tech-no code license, I once was a member of a few clubs while I lived in Orlando Florida with my parents. My Father is also an EMT and a Ham, WB3AVZ is his call. KB3DLP is mine. I recently moved to philly, so not active yet in Ares/Races however I am researching a contact to get into it. I choose this group to join, mainly being a ham and in the ems field it seemed to be a good choice. I am active on 2m, 70cm and 23cm while at work. I have a quad band IcomT81A that I use while at work, do not do much on 6m as the rubber duck and 5w of power hasn't gotten me contacts. A bit more of myself, I am a fairly young ham and EMT, at 22 years old. hmm I don't know much more to say about myself, other then Hello to all!
73's for now,
Jeremy Kiehner KB3DLP

PS: A question I'm curious about, I am working on making a 23cm, 7 element quad. I'm not sure ho to hook the coax up to the quad to allow me to tx. Any idea's would be great as it's my first attempt at building my own antenna. tnx

From: Jon Blatman, N3VZG, EMT-B
Topic: 202 Message: 204

Welcome, Jeremy.

My Name is Jon, and I live in Northeast Chester County, PA. I live between Paoli and Chester County hospitals, and am active with my local fire Co / EMS. and a somewhat local, very busy ambulance company. I am 17, almost 18, and will be looking for a job as an EMT as soon as I am old enough to treat on my own. I've had a no-code ticket for almost 8 years [Damn! it's been a long time;)] I've been a PA EMT for almost 2 years.

I have several friends who live in the city - two good ones are in Northeast philly.

Local Clubs:

PMRC (www.phil-mont.org)
I also belive that Temple has a university ham station, and I'm sure that someone would help you operate on HF.

I'm also wondering, Jeremy, if you or someone else on the list has a suggestion as to who in Philly Fire Dept I should contact to be able to ride with one of the center city medic trucks.

Jon
N3VZG

kb3dlp <jkiehner@...> wrote:
Hello,
My name is Jeremy, I'm an EMT in Philadelphia and currently work for Temple's Transport Team on the Critical Care Truck. I currently hold a Tech-no code license, I once was a member of a few clubs while I lived in Orlando Florida with my parents. My Father is also an EMT and a Ham, WB3AVZ is his call. KB3DLP is mine. I recently moved to philly, so not active yet in Ares/Races however I am researching a contact to get into it. I choose this group to join, mainly being a ham and in the ems field it seemed to be a good choice. I am active on 2m, 70cm and 23cm while at work. I have a quad band IcomT81A that I use while at work, do not do much on 6m as the rubber duck and 5w of power hasn't gotten me contacts. A bit more of myself, I am a fairly young ham and EMT, at 22 years old. hmm I don't know much more to say about myself, other then Hello to all!
73's for now,

205. Hello from me as well

Yahoo group: EMS_Amateur
Date: 2003-05-20 03:02:29 UTC
From: gi4xfr.dave
Topic: 205 Message: 205

Hello from Northern Ireland.

I have been a member of this group for some time now. I found the group by accident and I have enjoyed reading the messages, but I have never really introduced myself.

Please let me rectify that now. My name is David W. Beattie and I live in Belfast. I have been an amateur radio operator for 20 years - my Callsign is GI4XFR - and I am a medically retired EMT

I joined the Northern Ireland Ambulance Service way back in 1964 and spent all my 29 years service in Belfast.

Because of increasing deafness and arthritis in my knees and ankles, I was offered the opportunity 10 years ago in 1993 to take medical retirement. I will be 64 years young in June this year and next year I will be an old aged pensioner, since everyone in the United Kingdom must retire at 65.

In my early days in Ham radio I started another hobby of trading ambulance shoulder patches and I have gathered quite a collection of patches from services all over the world.

If anyone belonging to this group would be interested in trading patches from Northern Ireland with me, please have a look at my "Patches" web pages,

http://homepage.ntlworld.com/gi4xfr/patches.htm

The patches I am offering for trade are all in graphic form, and you will be able to read and see pictures of the type of ambulance I drove back in 1964.

I am sure you are all aware that the concept of the "Cardiac Ambulance" was pioneered here in Belfast by Professor Pantridge of the Royal Victoria Hospital and I am at present creating another web page about the restoration of the original Cardiac Ambulance. When that has been completed, I will announce it to this group.

Stay safe out there Guys

73 de Dave - GI4XFR

My name is Kenny Daniel. I have been First Responder Certified for six years. I am working on getting tested for the National Registry when I get home from a deployment with the U.S. Army. I have been licensed since July 2000. KD5KWS. My first DXperience was when I set up my RadioShack HTX-100 on my truck(POV) at the Fire Station. I turned it on and talked to an operator in Spain. I got so excited I ran inside to tell everyone. When I came back, he was gone. My Captain, at the time, was(and still is despite my attempts to change him) a TECH. As a matter of fact three or four people I know are HAMS in public service positions. More later... 73 de KD5KWS.

From: Timothy Mollman
Topic: 206 Message: 208

Well since this list has gotten busy all of a sudden I guess I should introduce myself. Name here is Tim, call is KC7YZZ, I've had my tech since 97. I'm currently an EMT-Intermediate in Oregon. I've been involved in EMS since I was 16, started out as a First Responder and took care of the local ambulance. Being in Rural Oregon it was common for only one person to show up for a call. Had to run as a Quick response unit and wait about half an hour for the nearest ALS unit to respond. I got my Basic when I turned 18 and have had my Intermediate for a little over a year now. I currently volunteer with a group in Portland Oregon that provides EMS for concerts and things like that http://www.nwrockmedicine.com
I also work at a fireline EMT during the summer on wildfires something that I really enjoy. I'm a young guy, being only 20, I plan on going after my EMT-P and my RN, hope to get into flight nursing someday. As for the Ham side of things, I operate mostly on 2m here in Central Oregon. Haven't had much time really to get ready for the general class, I'd like to as I have a HF rig sitting here going unused.

Take Care, Keep Safe,
Timothy - KC7YZZ

Jon, thank you for the reply, good to see someone in the area =)
Perhaps once I learn of some good 6m, 2m, 440, and 1.2ghz repeaters around, we'll get the pleasure of talking. I can ask at work when I go to work tomorrow as to whom you can talk to in Philly Fire for a ride along time. I work with a few ex fire medics, so the information should be fairly easy to come across.
I myself live right off 4th and south st's so I'm pretty much center city, it's ok, not bad, my building sucks for RF tho, I can only hit the channel 6 ARC repeater on 145.270 here in Philly.
I've had my no code for *thinking* oh my 14, 15....8 years also, since age 14 =). Had my EMT for only a year now, so still fairly new.
Also I believe it was your post asking about the over eager partner of yours. I would simply sit him down and talk to him, tell him to take control, and control his adrenaline. Otherwise the results (as you stated) could hurt someone more so then they currently are, which none of us want HIHI! We do a few self control classes for our new hires, if you're interested I may be able to get my hands on a copy of the teachings for you.

From: kg4bdn
Topic: 169 Message: 215

Good Evening,
My name is Thomas Jensen and I am a Amateur Radio Operator, working on my General Class. I am presently employed with the Military Sealift Command, Atlantic as a Medical Services Officer, (MSO) I retired from the navy in 1981 with 20 years service , then I sailed commercially for 10 years as a MDR, and have been with MSC for 10 years. I was a Navy Corpsman with the Marines during the Viet Nam conflict. In July I will be going to Bahrain as a Medical Services Officer stationed shoreside. I enjoy my work, and I take my HT with me everywhere I go. But I will not be taking it to Bahrain as the Govt. There don't recognize Hams and the HT is illegal there.

A "devil doc" before it became a catch phrase. I always DID think, though, that Navy Corpsmen had the most confusing uniform regs in the world.(hihihihihi) Welacome aboard Commander(?) (after all 20 years as a swabee...hihihihihi). 6th MAR 87-91 I personally witnessed what y'all are made of in Desert Storm. I am currently trying to get the Army to arrange a test for me over here. Well, in the Navy you could always grease the anchor chain... I will say ,though, that my EMT-B is on it's way(I hope). I will post further developments. Good luck with your upgrade.

As of midnight July 1, 2003 I became the Sharon VFD Rescue Captain.
Wish me luck with the year 03 - 04.

One direction I plan to take is joining services of both fire/ems
with the hams in my area. First, I should go on the air, I am a no-
code that hasn't been on in about two years.

Hello All,

I am a firefighter and EMT-B in PA. I recently acquired a Palm III (not Color). I am looking for a field guide type program that I can use during a call and make notes in it, and then reference it when I am doing my chart later. I am interested in whatever you do if you use a Palm Pilot or Pocket P.C. during your calls.

Thank you in advance for you assistance,

Jon

I have several scanners for sale as follows:

(1) Bearcat BC-200xlt VG condition Black leather case $135.00
(1) Bearcat BC-200xlt VG condition Brown leather case $135.00
(1) Realistic PRO-43 VG condition $150.00
(1) Realistic PRO-39 VG Condition $150.00

Also several trunking:
(1) Radio Shack PRO-92B VG condition $125.00
(1) Radio Shack PRO-95 as new condition $150.00

Misc:
(1) Bearcat BC-100xlt 75.00
(1) Motorola GP-300 16 VHF 5w HT 4 new batteries, belt clip, desktop charger
Moto boom mike like new $200
(1) Kenwood TM-241A 50w compact VHF 2 meter mobile $175.00

Will trade toward a BC-785D with BCi25 card or Kenwood TH-F6A. No other
trades tnx. All prices are firm, no low ball offers please.

http://www.defrance.org

Tech Med
PDA's In Medicine - Who uses them and for what by Jeff Brosius, NREMTP
By
Jul 21, 2003, 19:46

From the EMS House of DeFrance
http://www.defrance.org

A long, long time ago (well, not all THAT long ago,) paramedics and EMTs, Physicians, Nurses, and other healthcare providers were expected to memorize dozens of drug dosage charts, interactions, side effects, treatment algorithms, and other medical knowledge. Now, however, the volume of information is so vast, changes frequently, and is constantly updated. It would be a daunting task to just `keep up' with such changes.

Luckily, while the base of knowledge on which medicine is based changed rapidly, so too did technology. What was once available only on a major computer system server is now, literally, available in the palm of your hand. Personal Digital Assistants, or handheld computers are as common as trauma shears, stethoscopes, and penlights. With this advent of pocket-sized computers has come a myriad of programs, all designed to make our job a little easier. I'll cover some of the popular programs, offering my opinions on each. I don't advocate any one product, and have been given no incentive by any of the companies, so all the lawyers should be satisfied. To keep things simple, I'll refer to your handheld computer as a "Palm," which is the platform I use (Palm IIIxe.)

ABG Calculator v 2.01 by Matt DeCaro (mdecaro@...):

A quick and clean ABG calculator that gives you a "diagnosis" based on values you enter. You are prompted for the pH, pO2, pCO2, and HCO3. The program will then kick back a `calculated HCO3' value along with a diagnosis. Nice and simple, but I'm sometimes wary of the diagnosis given. For example, when I enter the following values: pH 7.5, pO2 72, pCO2 38, and HCO3 20, I get the generic "Resp. Alk & Met. Acid" (Respiratory Alkalosis and Metabolic Acidosis.) While this is only a minor issue, it can be annoying at time. This is easily offset, however, by the quick calculations, small memory needs (15K,) and simple design.

ePocrates QRX and ePocrates QID v 4.0 (www.epocrates.com):

One of the most popular software programs for the medical community, and with good reason. These are actually two programs that work in tandem, providing you with current drug/medication information, doses, interactions, and other info. The database is updated everytime you sync your Palm. Scroll down the list, write in the name of the drug, or search by medication type (Analgesic, psychiatric, cardiac, etc.) Tap the specific drug, and all you wanted to know is there. QID is more geared toward physicians and antibiotic prescriptions, but even this can be helpful to medics (ever have a patient taking an antibiotic for an unknown infection?) ePocrates will take a good sized chunk out of your memory (about 1700 K,) so be sure to think it over first. I use it daily, and feel that the drawback of memory use is worth it.

IV Rate Calculator v 1.3 by Andy Black (www.SpazTheCat.com):

Lets you calculate IV drip rates for different infusions. Comes with Dobutamine and Nitroglycerine built in, but you can add other drips/concentrations as you see fit. Small memory needs (16K) and simple to navigate. Allows you to select varied dosage schedules (mg/min, mcg/kg/min, etc.) and also has a "kg/lbs" switch for quick data entry.

MedCalc v 3.1 by Mathias Tschopp, MD (http://medcalc.med-ia.net):

A collection of various medical calculations all rolled into one program. It runs from `Absolute Neutrophil Count" to "Water Deficit," with others in between. I use it for the pregnancy calculator, Mean Arterial Pressure, and Q-Tc calculations. Good stuff for Critical Care Transports, but not all that helpful for daily street work. Takes up 177K of memory, which isn't all that much, but might be too much for something you use once a month.

Jeff Mann's EM Guidemaps by Jeff Mann, MD (http://emguidemaps.homestead.com/JeffMannEMguidemaps.html):

Dr. Mann has come up with a real winner here. He's managed to run down some of the more common illnesses, discussing how they happen, how to treat, and what to watch for. It's a little hard to get to the info you need if you're in a hurry, so I don't recommend you turn to this when working a V-Tach code, but if you want to know more about hyponatremia, this is the place to look. You need to have iSilo document reader (available as shareware from http://isilo.com) to get the guidemaps. The memory requirements vary depending on which guidemap you download: 1K for asystole, 21K for pulmonary embolism.

PalmEMS/PalmEKG v 2.0 by Iterum (www.palmems.com):

Palm EMS is a fairly comprehensive list of abbreviations, treatment guides, medications, and other info that can come in handy on those 4 am calls when your brain just doesn't want to work right. Palm EKG is a nifty program that will show an EKG strip of various rhythms along with the criteria (P-R interval, QRS duration, etc.) Both are easy to

navigate, though Palm EMS is simply one long list that one must scroll thru (you can write in the word you are looking for.) The medications listed are not nearly as comprehensive as ePocrates, nor do they give any info on proper dose, side effects, or interactions. The pictures included are well done, and the treatment protocols are also accurate, though it would be nice to modify them to conform to service-specific protocols. Memory: Palm EMS 414 K, Palm EKG 19K.

The following is a listing of links where you can get even more programs for your Palm. I've not tested them all, and therefore make no claims about them. Thanks go to Aaron Tarpine for the extensive list.

231. Aiken County SC news

Yahoo group: EMS_Amateur
Date: 2003-08-29 21:48:55 UTC
From: John
Topic: 231 Message: 231

from the ARRL

SOUTH CAROLINA COUNTY LAUDS ARES/RACES

THE Aiken, South Carolina, County Council has expressed its appreciation
to area Amateur Radio Emergency Service and Radio Amateur Civil
Emergency Service (ARES/RACES) volunteers for their "invaluable
assistance" during a communications emergency June 16. In a resolution
adopted at the council's August 19 meeting, the hams were praised for
responding after a lightning strike took out communications and
ambulance dispatch facilities at the sheriff's office.

"A net of volunteers from ARES/RACES was established on one of the Aiken
repeaters," the resolution explains.

HAMS were assigned to each remote ambulance location, and amateur
volunteers equipped with handhelds traveled with the ambulances during
calls and worked from emergency medical service substations and offices
during the radio emergency.

Other hams acted as net controllers from their home stations and as relays when
the ambulances got outside the coverage area of the local repeater.

"WITHOUT the assistance of the ARES/RACES, the communications center
would have been unable to dispatch ambulances, thereby jeopardizing the
lives of many Aiken County citizens," the resolution said. "County
Council desires to express its appreciation to the ham radio operators
who 'stepped up to the plate' in a crisis situation."

Does anybody in this group still post? I have not seen a topic in here in a longggggg time. Question's for the group, Does anybody use the kenwood th-g71a for search and rescue or ems or whatever? If so for what and what do you think of it?

Thanks all and lets keep the conversations going.....

KC2KUY- Bill
Not much action here but that th-g71A is a Kicking radio, I used it for almost four years and was extremely happy with it. I still use it but the wear and tear on it has cost the antenna to become loose and I haven't had the time money or inclination to have it fixed. But I would give it 5 stars on it performance.

236. RE: My problem!

Yahoo group: EMS_Amateur
Date: 2003-11-17 18:27:39 UTC
From: K C JONES
Topic: 236 Message: 236

What is wrong?

The treads on the antenna is stripped off, If yours is tight then I would not worry. I loaned my to my son and well you know I don't really know what happened. I now teach EMS and currently am not in the field. So I don't have need of a radio in my current job. For fours years it was used daily and the only trouble I had that I can remember is the battery clip broke off so I started using my belt radio holder. I hope you got a good deal, I am looking for a 2 meter for my sons care so he won't have to borrow my stuff!

Happy Hamming!

From: Cruise Promotions
Topic: 238 Message: 238

Here We Grow Again! New Jersey, Washington State and Iowa are already on-board. Florida and Massachusets are pulling their people together. Don't Miss Out!

Come aboard the Funship Carnival Victory, November 7, 2004. Join your fellow firefighters and EMT's for a 7 Day cruise of the Western Caribbean. We are stopping in Cozumel Mexico, Grand Cayman and Ocho Rios before returning to Miami. On top of a great price you will be our guest at an open bar cocktail party while onboard as well as receive $60 per cabin in ship board credit. Don't miss your opportunity to join us! Reduced airfare available from most major cities, just let us know your departure city when you call.

$25 per person initial deposits are due by 12/15/2003. Hope to see you come aboard!

Visit our site for all the details
<http://www.woodstreamtravel.com/firefighter_group.htm>
http://www.woodstreamtravel.com/firefighter_group.htm Inside Cabin Category 4A
<http://www.woodstreamtravel.com/firefighter_6a.htm>
http://www.woodstreamtravel.com/firefighter_6a.htm Ocean View Cabin Category 6A
<http://www.woodstreamtravel.com/firefighter_8a.htm>
http://www.woodstreamtravel.com/firefighter_8a.htm Balcony Cabin Category 8A (Best Value!)

Bill -

What are you wanting to do with the TK-2140?

IMO It is an excellent well built radio, my only complaint is that it doesn't have a stop on the channel knob so that you can tell what channel you are on without looking at the display.

Bill -

The software is windows based and does very well.

I like the radio, but I'm still from the old school and like to be able to count "channel clicks" and not have to look at the display. The battery life is excellent and it allows me to cover 2 meters and my public safety freq's in one radio.

I haven't really tested it to the extreme, but it is rated MIL STD 810 C, D & E for driven rain.

Bill,
I asked around about the FT-50r. One of the guys on
the net said that he had his submerged and it still
worked. Just for clarification... I don't think he
actually used it underwater. He said his has been put
through the wringer.

That was my "start more chats" chant. We do have us
an inactive group here. I see you are a Captain. Let
me get a Captain's point of view. Our local club
activates with the Department during a Mas-Cas
incident acting as Homeland Defense liaison. We did an
exercise last year. Do you think it is a good idea to
have a licensed HAM in the communications office? I
have considered actually making this request.

Oh i am sorry.....I think it would be great to have a ham in the comm bubble
as we call it. IF you are using ham radio as a comm sector (sort of speak)
then why have him/her outside or in another room? Our county has a pod all
set up for the hams to use we have vhf/uhf/hf all in the pod for use to use
anytime not just for emergencys.....
What does everybody else feel about this????

DUDE,
No reason to be sorry. People think I am wierd when I
do my chants. I do 'em anyway. The Yankee thing was a
poke. Meant no offense by it. I AM from Mississippi.
So I feel so OBLIGATED to mess with you guys in New
York(hihihihi). I was in Afghanistan with a FDNY guy
that was on duty 11 September 2001. He was pretty
cool. COMM SECTOR, is that IC speak? That actually
didn't occur to me. I just figured to have a liaison
in the dispatch office. Your COUNTY has a shack? Is it
always available for use or is it something that is
strictly controlled?

253. NEW!!!!!!!!!!!!!!!!!!!!!!!!!!!

Yahoo group: EMS_Amateur
Date: 2004-01-12 17:50:28 UTC
From: LARRY
Topic: 253 Message: 253

Hello to all,
My name is Larry and Im a HAM and a newly certified EMT-B in Maryland. I had previously been certified as a EMT-P for 12 years in Texas but was brain dead and let it lapse. Now Im back on track and have just been appointed EMS Lieutenant for the West Lanham Hills Volunteer Fire Department.
Heres my first question.....
Is there an amateur radio that can recieve and transmit 450-512MHz??
Please advise!!!!!!!!
Thanks,
Larry

254. Re: [EMS_Amateur] NEW!!!!!!!!!!!!!!!!!!!!!!!!!!

Topic: 253 Message: 254

Short answer: no

Long answer: That's far too much bandwidth for a radio to cover.
That's at least 72MHz (440-512), and is far too wide for any radio.
Also, the use of Part 97 certified radios on Part 90 (or part 22, for
that matter) is illegal, and can get your license pulled.

Stick with a commercial radio for LMR channels, and ham radios for ham
frequencies.

In regard to your question about ham radios that are expandable to recieve and transmit outside of the amateur bands in the uhf spectrum. There have been some public service agencies back east that have recieved warning letters about using amateur radios that are not type accepted.

However, I purchased on of the radio shack dual band radio's that they never got out to the public before they decided to get out of the amateur radio business. I am speaking of the HTX-420. The manual gives direction for keyboard inputs that open up the radio to tx and rx for 2m from 142.000 mhz to 149.880 mhz and 70 cm from 420.000 to 470.000 mhz. They state in the manual that the extended frequency range feature is only for MARS, CAPS, and public service users. I have never seen anything like this in the manual for a ham radio before. It is presumed since the manual as well as the radio had to be reviewed during the certification process with the FCC that they were aware of this when they certified the radio. LOL, sure, right. Anyways these radios keep coming up on ebay even though RS no longer has any stock of them.

I am new to this forum as well. In a previous life time I was a Park Ranger with the National Park Service. As a Park Ranger, I was trained as an EMT and both Structural and Wildland Fire Fighter. I had the nic name of doc during fire season for a number of years. I also volunteered with the communities that I lived in as both a firefighter and in EMS. After getting tired of eating beans as a Park Ranger I went back to school and ended up with a MSN in nursing from one of those little universities down in Texas. Hook'm Horns. We beat Nebraska again this year. But who didn't.

Back in the days of being a crew chief on our local ambulance service, I had to carry a motorola portable that gave me access to fire/ems,local law enforcement and mutual aide. I can't remember what my number was though. But it did come in handy. As long as you didn't abuse the priviledge. They had a decent repeater set up for the hill country of Texas. The dream in those days was to pick up a Bendix-King that was field programable. I still wouldn't mind having one of them.

A couple of years ago decided to get back into radio, so I took up the amateur hobby. I have thought about starting riding again. There is a volunteer service down the road from me on the South side of Des Moines. My understanding is that it is a BLS service.

At the present I pound on livers for a living for a pharmaceutical. Got tired of being around the managed care environment of the

dysfunctional health industry. Oops, shouldn't go there.

Well enough is enough.

Attachments: 1 described; binary payloads are missing from this source WARC

Actually, there are Amateur radios that will cover 450-512mhz. BUT, the specs for ham radio use a different fm deviation of 20 khz while the 450-512 radios (a.k.a. commercial radios is 6.25khz. So, that extra 13.75 khz WILL cause interference on the four channels adjacent to the frequency you are on. Example: if you are on med 6 you Will also be heard on med-52, med-53, med-61 & med-62. Kapesh?
That kind of interference is totally unacceptable and can cause real problems in areas where the extended PM frequencies are used. *see attachment.*
I figure we can lay out the technical answer here, so there is no misunderstanding.

Paramedic frequencies are so tight you MUST use LMR radios.

257. Upcoming radio/web-simulcast interview with EMS Author C.B. Garris on Sat 1/17

Yahoo group: EMS_Amateur
Date: 2004-01-16 08:16:19 UTC
From: C.B. Garris
Topic: 257 Message: 257

Date :Saturday, January 17, 2004
Time : 4p.m. Mountain Time, 3 P.M. Pacific, 5 P.M. Central and
6 P.M. Eastern on National Talk Radio:

I am being interviewed this weekend on the Radio Colorado Network
about my book M.O.S. ☐ Member of the Service. It will be aired both
via radio and simulcasted via the web:

Via the Web at:

http://www.radiocoloradonetwork.com ☐

Once on the page, scroll down the to the icon under the words that
say: LISTEN LIVE ☐ You will need Windows Media Player to listen
in, as it will load automatically once you click in. The interview
will last about thirty to forty minutes. If you do not have the
Windows Media Player, you can obtain it as a free download at :

http://www.microsoft.com/downloads/search.aspx?
displaylang=en&categoryid=4

On Colorado Stations:

1060am
Denver/Longmont

610am
Vail

1450am
Buena Vista

1580am
Colorado Springs

102.3fm
Gunnison

Feel free to listen in and let me hear from you. The book is a few
weeks from release. http://www.memberoftheservice.com

C.B. Garris
cbgarris@...
Author
M.O.S. - Member of The Service (c) 2004
ISBN # - 1-55395-617-6

http://www.memberoftheservice.com ==> RELEASE DATE - February 2004

A new, eye-opening novel about a pre-9/11 member of NYC EMS {The New York City Emergency Medical Service}; providing a rare, candid look at the lives and experiences of New York City's EMT's and Paramedics; in an organization that was one of the largest and most elite agencies of pre-hospital emergency medicine (EMS) providers in the world.

Inspired by true events, these dramatic incidents unfold with startling reality, as readers are transported to these life or death situations found within the New York City streets. Reader's will discover the effects they take on the rescuers and what it also means to be a Member of the Service. This novel will share why members of NYC EMS were entitled New York City's BEST!

From: John
Topic: 253 Message: 260

Lets see.....

Amateur radios are not typw accepted for use on commercial or public safety freqs. Therefore you should not use it to transmit there.

Frequency Step and Frequency width are two different things.
Just because your radio can step the channel to a 12.5 step doesn't change how wide your transmission is. Your radio will still emit a 25KHz wide signal. Currently commercial and public safety frequencies are in transition between 12.5KHz narrowband (Emmision designator 11K2F3E)and 25Khz widband (Emmission designator 20K0F3E). Older licenses are wideband, newer licenses are narrowband. The FCC mandated all new license applications be narrowband only. It was supposed to be effective Jan 2004, but they extended the date for a few months. The FCC has mandated that all remaining VHF highband and UHF be switched to 12.5 over the next few years. They keep changing the date. I think its currently 2013. Business freq's first and public safety a year or two after that.

Your wide signal will be moved half the distance but will still be too wide. LMR radios that support 12.5KHz emmissions will center the channel on a 12.5 KHz step and transmit NARROW width.

I will try to draw a diagram to explain.
Let the dashes ----- represent the radio signal and let the vertical lines | represent the frequency step.

```
[ |------|------| ] Your radio, wide signal on regular freq
[------|------| ] Your radio, wide signal on 12.5 step
[ ---|--- | ] LMR radio, narrow signal on 12.5 step
```

I hope that makes sense.

Are you looking for a portable radio or mobile?
Motorola Waris series covers 450-512.
HT750, HT1250, HT1550XLS portables
CDM750, CDM1250, CDM1550LS+ mobiles
450-512 models do not however cover the ham frequencies.

If you need to go above 470 MHz make sure you get the right split.
They make the same model radios with a 403-470MHz split. (Covers ham band but won't go above 470)

You may want to look at ICOM commercial radios.
The have a version of the F40 portable that covers 440-480
and a 45 watt Mobile F621 covers 440-490MHz.
If you can live with that frequency range that may be a good solution.

Also they have a new model submersible, waterproof portable F60 450-512 MHz.

In short there is no one radio (that I know of) that will cover ham band AND all the way up to 512MHZ.

I agree with the suggestion some one else on the list made, use ham radio for ham band and use commercial radio for commercial/PS band.

I was looking for specs on a commercial radio when my search brought me to this pdf file.

www.ncjrs.org/pdffiles1/nij/191161.pdf

It is worth looking at. It it is a very comprehensive comparison of radios for use by emergency first responders. Big document 422 pages. Might be worth putting on a cd. I am not about to print the darn thing. Department of Justice publication with a 2002 publication date.

From: sinbad5210
Topic: 262 Message: 262

There are a number of commercial radios that can be modified for use in the amateur bands. The FCC does not prohibit there use on the have frequencies as long as they do not interfere with other operations. You may not be able to find a commercial radio that can be operated from 421 to 512, but something that operates on either the top or bottom of the uhf spectrum and captures the amateur band.

for those who dont have their ticket get it now with these new ruld changes it would be an atvantage to have yoru tickent scott

ARRL to Propose New Entry-Level License, Code-Free HF Access

NEWINGTON, CT, Jan 19, 2004--The ARRL will ask the FCC to create a new entry-level Amateur Radio license that would include HF phone privileges without requiring a Morse code test. The League also will propose consolidating all current licensees into three classes, retaining the Element 1 Morse requirement--now 5 WPM--only for the highest class. The ARRL Board of Directors overwhelmingly approved the plan January 16 during its Annual Meeting in Windsor, Connecticut. The proposals--developed by the ARRL Executive Committee following a Board instruction last July--are in response to changes made in Article 25 of the international Radio Regulations at World Radiocommunication Conference 2003 (WRC-03). They would continue a process of streamlining the amateur licensing structure that the FCC began more than five years ago but left unfinished in the Amateur Service license restructuring Report and Order (WT 98-143) that went into effect April 15, 2000.

"Change in the Amateur Radio Service in the US, especially license requirements and even more so when Morse is involved, has always been emotional," said ARRL First Vice President Joel Harrison, W5ZN, in presenting the Executive Committee's recommendations. "In fact, without a doubt, Morse is Amateur Radio's 'religious debate.'" The plan adopted by the Board departs only slightly from the Executive Committee's recommendations.

The "New" Novice

The entry-level license class--being called "Novice" for now--would require a 25-question written exam. It would offer limited HF CW/data and phone/image privileges on 80, 40, 15 and 10 meters as well as VHF and UHF privileges on 6 and 2 meters and on 222-225 and 430-450 MHz. Power output would be restricted to 100 W on 80, 40, and 15 meters and to 50 W on 10 meters and up, thus avoiding the need for the more complex RF safety questions in the Novice question pool.

"The Board sought to achieve balance in giving new Novice licensees the opportunity to sample a wider range of Amateur Radio activity than is available to current Technicians while retaining a motivation to upgrade," said ARRL CEO David Sumner, K1ZZ. "It was also seen as important to limit the scope of privileges so the exam would not have to include material that is inappropriate at the entry level."

As an introduction to Amateur Radio, the Novice license served successfully for most of its 50-year history. The FCC has not issued new Novice licenses since the 2000 license restructuring, however. Under the ARRL plan, current Novice licensees--now the smallest and least active group of radio amateurs--would be grandfathered to the new entry-level class without further testing.

Anticipating assertions that the new plan would "dumb down" Amateur Radio licensing, Harrison said those currently holding a ticket often perceive the level of complexity to have been greater when they were first licensed than it actually was. "Quite frankly," he said, "if you review the questions presented in our license manuals throughout the years, you will be surprised how they compare to those of today."

Technicians and Generals

The middle group of licensees--Technician, Tech Plus (Technician with Element 1 credit) and General--would be consolidated into a new General license that no longer would require a Morse examination. Current Technician and Tech Plus license holders automatically would gain current General class privileges without additional testing. The current Element 3 General examination would remain in place for new applicants. ARRL already has proposed additional phone privileges for Generals in its "Novice refarming" petition, RM-10413, but the FCC has not yet acted on that petition.

Morse Code Testing Retained for Extra

At the top rung, the Board indicated that it saw no compelling reason to change the Amateur Extra class license requirements. The ARRL plan calls on the FCC to combine the current Advanced and Amateur Extra class licensees into Amateur Extra, because the technical level of the exams passed by these licensees is very similar. New applicants for Extra would have to pass a 5 WPM Morse code examination, but the written exam would stay the same. The League's plan calls for current Novice, Tech Plus and General class licensees to receive lifetime Element 1 (5 WPM Morse) credit.

"This structure provides a true entry-level license with HF privileges to promote growth in the Amateur Service," Harrison said. "It also simplifies the FCC database by conforming to the current Universal Licensing System (ULS) structure and does not mandate any modifications to it."

Sumner concurred. "The Board started out by recognizing that three license classes was the right number when looking down the road 10 or 15 years," he said. "We need a new entry-level license."

"On the other hand, there's nothing particularly wrong with the existing Extra class license," he continued. "The change in the international regulations notwithstanding, the Board felt that the highest level of accomplishment in the FCC's amateur licensing structure should include basic Morse capability."

Sumner and Harrison say the current Technician entry-level ticket provides little opportunity to experience facets of ham radio beyond repeater operation. "The quality of that experience," Sumner said, "often depends on the operator's location."

Among other advantages, Sumner said the plan would allow new Novices to participate in HF SSB emergency nets on 75 and 40 meters as well as on the top 100 kHz of 15 meters. The new license also could get another name, Sumner said. "We're trying to recapture the magic of the old Novice license, but in a manner that's appropriate for the 21st century."

Proposal Includes "Novice Refarming" Band Plan

The overall proposed ARRL license restructuring plan would more smoothly integrate HF spectrum privileges across the three license classes and would incorporate the "Novice refarming" plan the League put forth nearly two years ago in a Petition for Rule Making (RM-10413). The FCC has not yet acted on the ARRL plan, which would alter the current HF subbands. The Novice refarming proposal would eliminate the 80, 40 and 15-meter Novice/Technician Plus CW subbands as such and reuse that spectrum in part to expand phone/image subbands on 80 and 40 meters.

The ARRL license restructuring design calls for no changes in privileges for Extra and General class licensees on 160, 60, 30, 20, 17 or 12 meters. Novice licensees would have no access to those bands.

Proposed Phone/Image HF Subbands (Includes Novice Refarming Proposal)

80 Meters

Extra: 3.725-4.000 MHz (gain of 25 kHz)
General: 3.800-4.000 MHz (gain of 50 kHz)
Novice: 3.900-4.000 MHz (new)

40 meters

Extra: 7.125-7.300 MHz (gain of 25 kHz)
General: 7.175-7.300 MHz (gain of 50 kHz)
Novice: 7.200-7.300 MHz (new)

15 meters

Extra: 21.200-21.450 MHz (no change)
General: 21.275-21.450 MHz (gain of 25 kHz)
Novice: 21.350-21.450 MHz (new)

10 meters

Extra and General: 28.300-29.700 MHz (no change)
Novice: 28.300-28.500 MHz (no change)

Proposed CW/Data-Exclusive HF Subbands (Includes Novice Refarming Proposal)

80 meters

Extra: 3.500-3.725 MHz
General: 3.525-3.725 MHz
Novice: 3.550-3.700 MHz

40 meters

Extra: 7.000-7.125 MHz
General: 7.025-7.125 MHz
Novice: 7.050-7.125 MHz

15 meters

Extra: 21.000-21.200 MHz
General: 21.025-21.200 MHz
Novice: 21.050-21.200 MHz

10 meters

Extra/General: 28.000-28.300 MHz
Novice: 28.050-28.300 MHz

From: sinbad5210
Topic: 266 Message: 266

Anybody using the TK-370? The one I am looking at has a bandsplit of 450-470 mHz. Is it possible to program into the amateur bands? I understand the first 32 or 24 channels can be programmed without an interface or software. I was thinking about using one on GMRS. And if it can be programmed into the ham bands that would be icing on the cake.

If i am correct, the FCC / Laws say

Ham radios on commercial frequencies - BAD! (also illegal)

I believe it has to do with amateur equipment not being commercially type-accepted.

Okay, this has taken awhile. BUT, FCC regulations
dictate that "no harmful interference be caused". Ham
freqs and commercial freqs coexist, naturally. The
idea is to not interfere with commercial broadcasters.
If you do, however, YOU(the ham) will lose.

To be honest with you, I don't know of any public safety agency that uses trunked VHF or UHF. There may be some out there! I do know FDNY is madder than hell at Motorola. Motorola covered up the fact that the 800Mhz SMARTNET System in Lower Manhattan crashed within minutes of the initial alarm and everyone using it was carrying a dead radio.
Now, there are two tracks to this that are getting zero attention by the news media. The first track is that the system crashed because of system overload because SMARTNET has never worked right and Motorola has no plan to fix it. Track Two is far more sinister, Motorola was ordered by an authority above the law to shut the system down. That authority may be someone from the shadow gov't. or Order of Skull & Bones.

Trunking has one major problem with public safety. There is such thing as a trunking pager. 700/800/900Mhz are lousy frequency bands for public safety. It's my opinion that trunking for amatuer use is strictly developmental and has no practical long term use.

Another point, it was motorola who got the air force to demand that CAP use special radios so motorola could sell the damn radios to CAP. Every move Motorola makes is to make money. Pure Greed.

These work on conventional also...I know about CAP i am a member and i will be letting my membership go due to the fact they will not even tell the members the new freqs that we a swicthing to in 3 yrs...I think that is BS.....15+yrs gone....
They are telling me to send my 2140 to some guy in Albany and have him program it..Even if it takes about 2 months...Sorry can't do it i use mine everyday...So i am going bye bye...lol.....Sorry.....

312. M.O.S - Member of the Service, a new EMS novel is now available

Yahoo group: EMS_Amateur
Date: 2005-01-01 04:28:01 UTC
From: C.B. Garris
Topic: 312 Message: 312

Thank you all for waiting.

After much ado and several technical snafu's, M.O.S. Member of the
Service is now available. Please feel free to visit the updated
website to the book for information on how to order in the "Buy the
Book" section @ http://www.memberoftheservice.com

The book will also be available through the websites and bookstores
of Border's, Amazon.com, Barnes and Noble and other's shortly; and
you are also able to order the book through your favorite bookstore
using the ISBN # 1- 55395- 617- 6

I greatly appreciate your patience, I hope you all find the work
engaging and informative, and please let me hear from you when you
have viewed the book. I would love to hear your thoughts. I wish
you all a very safe and happy new year in 2005!

C.B. Garris
cbgarris@...
Author
M.O.S. - Member of the Service (c) 2004
ISBN# - 1-55395-617-6
http://www.memberoftheservice.com - Now Available !!!

A new, eye-opening novel about a pre-9/11 member of NYC EMS {The New York
City Emergency Medical Service}. This novel provides a rare, candid
look at the lives and
experiences of New York City EMT's and Paramedics; an organization that was
the largest and most elite and ground-breaking agencies of pre-hospital emergency medicine
(EMS) providers in the world.

Inspired by true events, these dramatic incidents unfold with startling reality, as
readers are transported to these life or death situations found within the New York
City Streets. Reader's will discover the effects they take on the rescuers and what
it also means to be a Member of the Service. This novel will share why members
of NYC EMS were entitled New York City's BEST!

Report says North Tower firefighters did not receive orders to evacuate
The finding clashes with the 9/11 commission's finding that firefighters chose not to leave doomed building

Sunday, April 10, 2005

The latest federal analysis of the emergency response to the 9/11 attack on the World Trade Center has stoked anew the controversy over whether radio problems caused firefighter deaths at Ground Zero.

In a report issued last week, the National Institute of Standards and Technology (NIST) concluded that perhaps half the firefighters in the North Tower did not receive the evacuation orders broadcast by commanders outside the building shortly after the 9:59 a.m. collapse of the South Tower.

The North Tower fell 25 minutes later, killing an estimated one third of the 343 firefighters lost at Ground Zero.

"Data show that some heard the evacuation orders while other personnel on the same floors on the same floor did not hear the orders," the NIST said. "Lack of timely information and inadequate communications capabilities likely contributed to the loss of emergency responder lives."

While not flatly contradicting it, the NIST finding was pointedly different from the one reached on the radio issue last year by the Sept. 11 commission. It discounted the radio problems as a "primary" cause of casualties.

The commission said that although many firefighters in the North Tower did not hear the evacuation orders on their radios, news of the alerts was quickly spread by Fire Department commanders armed with bullhorns, and by police officers who had received a radio warning of the building's imminent collapse from a police helicopter hovering above.

But instead of leaving the tower right away, many firefighters chose to look for missing colleagues and continue aiding civilians, the

commission concluded in its July report.

The disparity between the two assessments is all the more intriguing in view of the fact that both were based on interviews with 70 surviving firefighters conducted jointly by investigators from the commission and NIST.

"The interviews were actually done mostly by us," explained chief NIST investigator Shyam Sunder to a reporter after the release of his agency's report.

As NIST representatives asked the firefighters questions, "commission staffers would be there taking notes at the same time," Sunder said.

Sunder and fellow NIST investigator Randy Lawson said they learned from the interviews that evacuation orders were relayed by word of mouth, to a certain extent, and that a number of firefighters did elect to continue rescue operations rather than to leave the North Tower immediately.

But NIST stopped short of factoring this information into their finding on the radio issue because "there was no way to quantify" the data, Lawson explained.

"We know that people did stay behind to help, but we do not have an accurate count of how many people did that," he said.

Attributing the deaths of firefighters to their decision to remain in the building "is not something we have chosen to say [in the report] because we have not been able to get quantitative information," said Sunder, explaining, "We have to go by facts and data that we can confirm."

As result of the communications failures, "There was a loss of first responder lives," he said. "How many we do not know."

Relatives the firefighters killed at Ground Zero have long been skeptical that the lost North Tower first responders knew of the evacuation orders. One relative, Joseph Esposito of Dongan Hills, himself a firefighter, said in a recent interview that it would have been very difficult for commanders with bullhorns to relay the radio alerts successfully to rank-and-file personnel amid the maelstrom of 9/11.

Even in an ordinary fire, "there is a lot going on that people just don't understand," said Esposito, who lost a brother and a cousin at the Trade Center. "There is a lot of adrenaline flowing through firefighters. You see people dying right in front of you."

But he added that even if they had gotten the evacuation alerts, the North Tower firefighters would have never left stranded colleagues behind.

"What was happening was they were getting mayday calls from members of their units," he said. "And when a firefighter is in a life-or-death situation, we will not abandon him."

You are correct, the radio must be type accepted by the FCC to operate on the commercial frequencies. Ham radio is considered an "experimental" group so the ham radios do not have to meet the same requirements.

Commercial radios on Ham freqs are o.k., but Ham radios on Commercial freqs are a huge nono. Ham radios DO have to pass certification, but it's not as stringent as that for Part 90 radios. One of the main things that is required for Part 90 radios is that the frequencies cannot be easily operator selectable.

331. Dual band radios

Yahoo group: EMS_Amateur
Date: 2006-02-19 22:10:33 UTC
From: ldturner55
Topic: 331 Message: 331

I have had my Alinco DJ-596 for about 3 years. It has served me well as a 2M/440 radio. It has been modified but I rarely use it in the modified bands. I am the EMS Lt. for a volunteer FD in Maryland.

Larry

From: John Gleichweit
Topic: 331 Message: 332

You shouldn't be transmitting with it at all outside of the ham bands. If you want a dual band radio that is legal for part 90 use, pick up a Yaesu FTH-2070 off of ebay.

From: jmscraigs
Topic: 516 Message: 516

Last week someone had mentioned they were looking for someone to do a logo design. I had my logo done by this company for only $99, what is great about them is that they give you unlimited revisions to your selected logo. If you want to check them out here is the link:
http://www.lokologodesign.com/bronze_logo_design_package.html
They did a really good and are very professional with a quick response.

Affordable Logo Design!
As a recommendation from a friend, I went with Paramount Web Consulting to do my logo design. Being a small business, I was really impressed with their low rates compared to other companies on the net. They did an amazing job on my logo + they give you unlimited revisions! For any of you who need a logo created you should definitely check em out, here is the link: http://www.pwcwebmasters.com/

Greetings group! Yahoo has promoted me to moderator and I will try
my best to clean up the group so it can once again be viable.

I appologize for the double posting for some...I didn't realize how many
people had placed themselves to no mail! PLEASE leave
your message notification set to special notices. I have gone thru
and set those who were no email. Any other clasifications were left as they were.

First order of business is to delete the spammers and all the spam
from the archives. For now lets try to leave the group on open posting
and see where it gets us.

Suggestions are welcome and please feel free to post relevent info
for all of us to help each other!

933. Any folks carry a 2 mtr-440 rig in their ambulances?

Yahoo group: EMS_Amateur
Date: 2009-09-06 01:16:10 UTC
From: wa2ntw
Topic: 933 Message: 933

I was wondering how many of you carry a HT when you work?
Either as EMCOMM or just as a way of staying in touch with others
while on duty. (Especially those in WA, CA, Gulf States and
Tornado alley)

Do any of your ambulances have a permanently mounted two meter
rig? CB rig? FMRS?

How many folks have access to a mobile command post that has
amateur capabilities?

This is an informal survey of sorts to see what others have
as interop for other groups (CERT, ARES, RACES & REACT).

Thanks!
WA2NTW

934. Re: Any folks carry a 2 mtr-440 rig in their ambulances?

Yahoo group: EMS_Amateur
Date: 2009-09-07 18:04:23 UTC
From: spack171
Topic: 933 Message: 934

I'm currently not doing full time EMS. I'm a Paramedic and RN, doing ER right now with plans to go back to full time EMS soon. When I worked the truck here's what I did Amateur wise.

1.Motorola JT 1000 programmable with local repeaters programmed. I have UHF and VHF.

2.Local repeaters and simplex programmed if I was not carrying the JT. Also have MT2000 and HT1000's in both band species.

3.Occasionally carried a ham HT, usually Yaesu FT60 or VX150 in addition to the above.

4. One place I worked there were 4 of us on the same shift that were hams. We used our ham radios to talk back and forth during the shift. Sort of private admin channel for us. Used to coordinate lunch, see what the other crew was up to, etc.

5. When I worked as a flight paramedic in Idaho and also did SAR, 99% of the agencies I needed to talk to were VHF, so my JT1000 served me well.

I've never worked anyplace that had ham capabilities in the rigs. I did see one place that had ham channels programed, but cannot remember where that was. Most places I've worked the mobile command posts have ham capabilities.

In short, if I'm on the truck, I want an amateur radio with me.

Hope this helped answer your Q's.

Also, I've lived/worked in WV, VA, ID, MT, and WY.

From: wa2ntw
Topic: 937 Message: 937

First, welcome to the new members who have joined the group.
Second, a reminder that the group is for on topic messages only!
SPAM WILL NOT BE TOLERATED! You should make posts that relate
to Amateur radio and EMS, not way off topic things.

You need to set your mailing to a minimum of special notices.
If you set no mail it will be changed during monthly cleanups.

New members are on moderation until they prove that they are here
to add something to the group. If you post garbage, you are banned...
no questions asked. Other group moderators will be notified of
your activities and other attempts to join will be denied.

Please feel free to send out an introduction and any questions for
the group. There is a lot of experience out here...

940. FCC clarification on rules of using ham radio for employer during drill

Yahoo group: EMS_Amateur
Date: 2009-10-29 16:37:03 UTC
From: wa2ntw
Topic: 940 Message: 940

Has anyone had any conversations with their employer about using ham radio during a disaster? Curious what preplanning has occured out there...

What kind of traffic would you pass and would you be using for deployment or just checking in to let them know where you are located?

Check the ARRL website - they just posted a ruling from the FCC on your question. I found it very interesting!

944. Preparing for the big one

Yahoo group: EMS_Amateur
Date: 2010-02-02 23:44:09 UTC
From: wa2ntw1
Topic: 944 Message: 944

Now that we have had a chance to digest some of the things from
the Haiti earthquake any ideas on things that hams could do better
when the next big one hits home?

A bunch of questions hit my mind and I am looking for things to
be a little bit better prepared...

Do you have a clamshell?
Do you have a way to charge rechargable batteries?
Do you have a mag mount or other simple antenna that can be
placed on the ambulance if it is stationary?
if it is being used for transports?
Do you keep a list of emergency frequencies?

Please add to this list and lets get some dialog going here!

Dolph

948. Hazy days of summer

Yahoo group: EMS_Amateur
Date: 2010-08-02 00:23:25 UTC
From: wa2ntw1
Topic: 948 Message: 948

Hello all! Now that we are in August maybe things will be cooler???
A few tips to keep in mind: make sure your batteries are charged,
check to see if they need to be replaced. Do you have a clamshell?
If so, then make sure contacts are clean and if you keep batteries
in it make sure they are fresh.

I now have so many go bags I need a trailer to keep them all!
Do you know what is in each bag? I am in the process of making up
my contents list so I can check and replace items each season.

Had the pleasure of attending a talk about solar weather and the ramifications for radio communication and power grid concerns.
If your conventional system goes down make sure you have some back up to let folks know your location and status.

One more thing, when you replace your cellphone consider donating the old one to a group that refurbs them and gives to battered women or
homeless. They can be programmed for 911 and one other emergency
number for notifications. (check with your provider to see if other features are available as well)

Be safe out there!

From: wa2ntw
Topic: 957 Message: 957

Remember to keep your batteries charged and ready to go!
Thoughts and prayers to all in the South who have been
wacked by spring storms. Remember that folks out of the
area sometimes can assist, especially finding specialty
items. One friend has found some materials for a group.
His words, "best thing I have done in a long time"!

Lastly, keep a list of repeaters and simplex channels
for your area. You may have to reprogram on the fly and
to do it from memory is almost impossible.

Stay safe and be prepared!

958. Child found dead, SP need help for ID

Yahoo group: EMS_Amateur

The body of a young boy was found in South Berwick Maine. State police say they don't know who he is, and that his death is considered suspicious. They also say they have no reports of missing children anywhere in New England. If you have any information that may help state police, please give them a call in Augusta 207- 624-7000.

I have added his picture in the photos area.

962. Winter operations

Yahoo group: EMS_Amateur
Date: 2011-11-28 23:15:38 UTC
From: EMS_Amateur-owner@yahoogroups.com
Topic: 962 Message: 962

Time to check your spare batteries and if you have a mag mount you use clean the base before road salt adds more crud. Throw some extra gloves and socks in your bag, while you are at it...put some hi energy bars in too!

In the northern climate we are used to cold weather showing up in November but that has not been the case this year. Two holiday snowstorms in New England has been too wierd! NY not having snow on the ground yet...extremely wierd. In the south you are wanting for water and I can only imagine those who are seeing towns that disappeared years ago.

Get ready for a wild winter!

963. monitor nat calling freqs

Yahoo group: EMS_Amateur
Date: 2012-03-04 22:29:44 UTC
From: wa2ntw
Topic: 963 Message: 963

Since the weather outbreak of last week brought a lot of folks to respond it would be smart to monitor 146.52 if you have an event happen.
Most hams will go on their local repeater but if it is down they hopefully will go to simplex and monitor 52.

Check to see what your local EMA has for monitoring capability as well as check your county or state plan. I usually scan a few freqs when weather gets ugly.

Remember when out of your area, monitor ham and public safety so you can get some good situational awareness!

Be safe
Dolph

964. East Coast storm?

Yahoo group: EMS_Amateur
Date: 2012-10-23 23:48:01 UTC
From: wa2ntw
Topic: 964 Message: 964

For those in the Southeast, looks like another storm is knocking on our door! For those in the Northeast, one prediction says Sandy will visit you too!

In either case it is time to check your batteries and radios. Make sure your go kits are stock rotated and if you change stuff seasonally time to rotate if you have not already done so!

Cabbage Night is coming up. Team up with local folks for monitoring pranksters. Be ready for those who injest wierd stuff. And two old

965. Standbys for events

Yahoo group: EMS_Amateur
Date: 2013-04-15 13:09:27 UTC
From: wa2ntw
Topic: 965 Message: 965

How many of you do standbys for special events like races, marathons
and triathlons? Do you carry a ham HT with you when you do so?
Do you check in with the ham group doing comms?

I did a tri this past weekend and it would have been nice to have
been able to talk to the paramedic when we had a rider go down.
Interoperability can be a great thing, especially when you have three
different groups working the same event but on different radio systems!
Just having one person with three radios listening to all traffic
can help because important traffic can be relayed to all involved groups.

As we move into Spring flooding and tornadoes will be the things
on most peoples minds but almost every weekend there are special
events that are worked by EMS and Hams. Work together and play nice in the sandbox.

966. Springtime clean ups

Yahoo group: EMS_Amateur
Date: 2015-05-02 23:55:21 UTC
From: wa2ntw@...
Topic: 966 Message: 966

Springtime preps should be completed for those in areas prone to spring events.
Ice Jams have already hit Maine, Tornadoes have struck in many states and here in FL we are starting to ramp up for hurricane season.

If you live in an area where you have 4 seasons it is time pull out winter stuff and replace with warmer gear. Check your batteries that have been sitting and make sure they still hold a charge!

Lastly, if you are a member of any specialty teams look into Amateur comms as another way to keep tabs on what is happening post big event.

Be safe out there!

Dolph
